

Energy Efficiency, in transport

UN-ECE - 3 October 2022

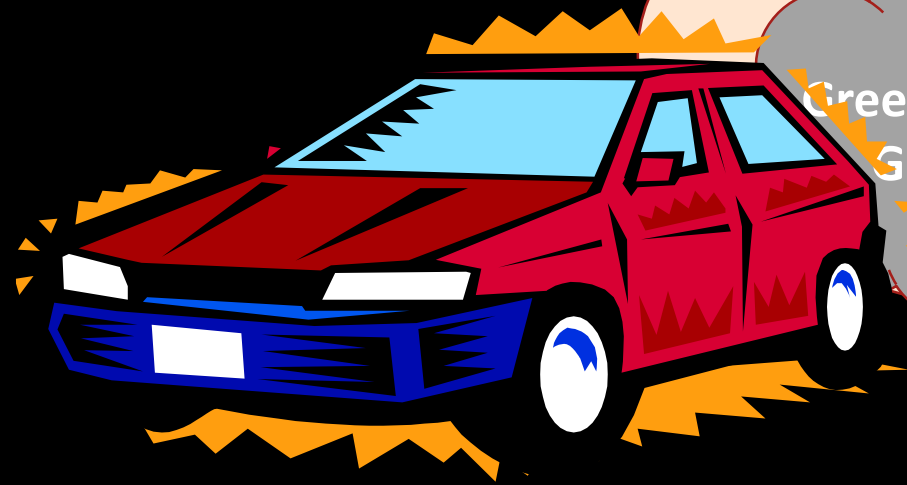

Benoît Lebot - Ministry of Ecological Transition, France

- benoit.lebot@developpement-durable.gouv.fr

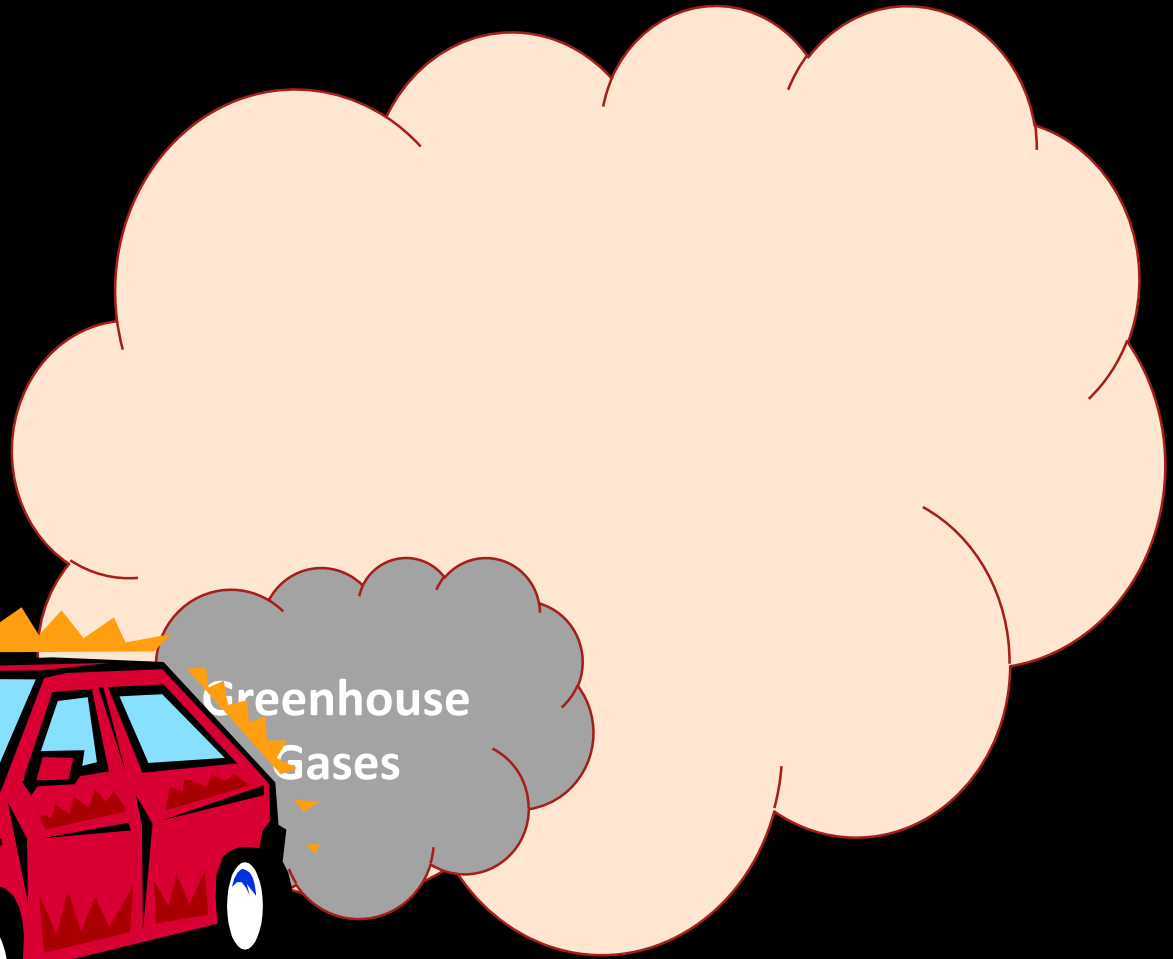

Everything everyone does –
every day and everywhere –
requires energy.

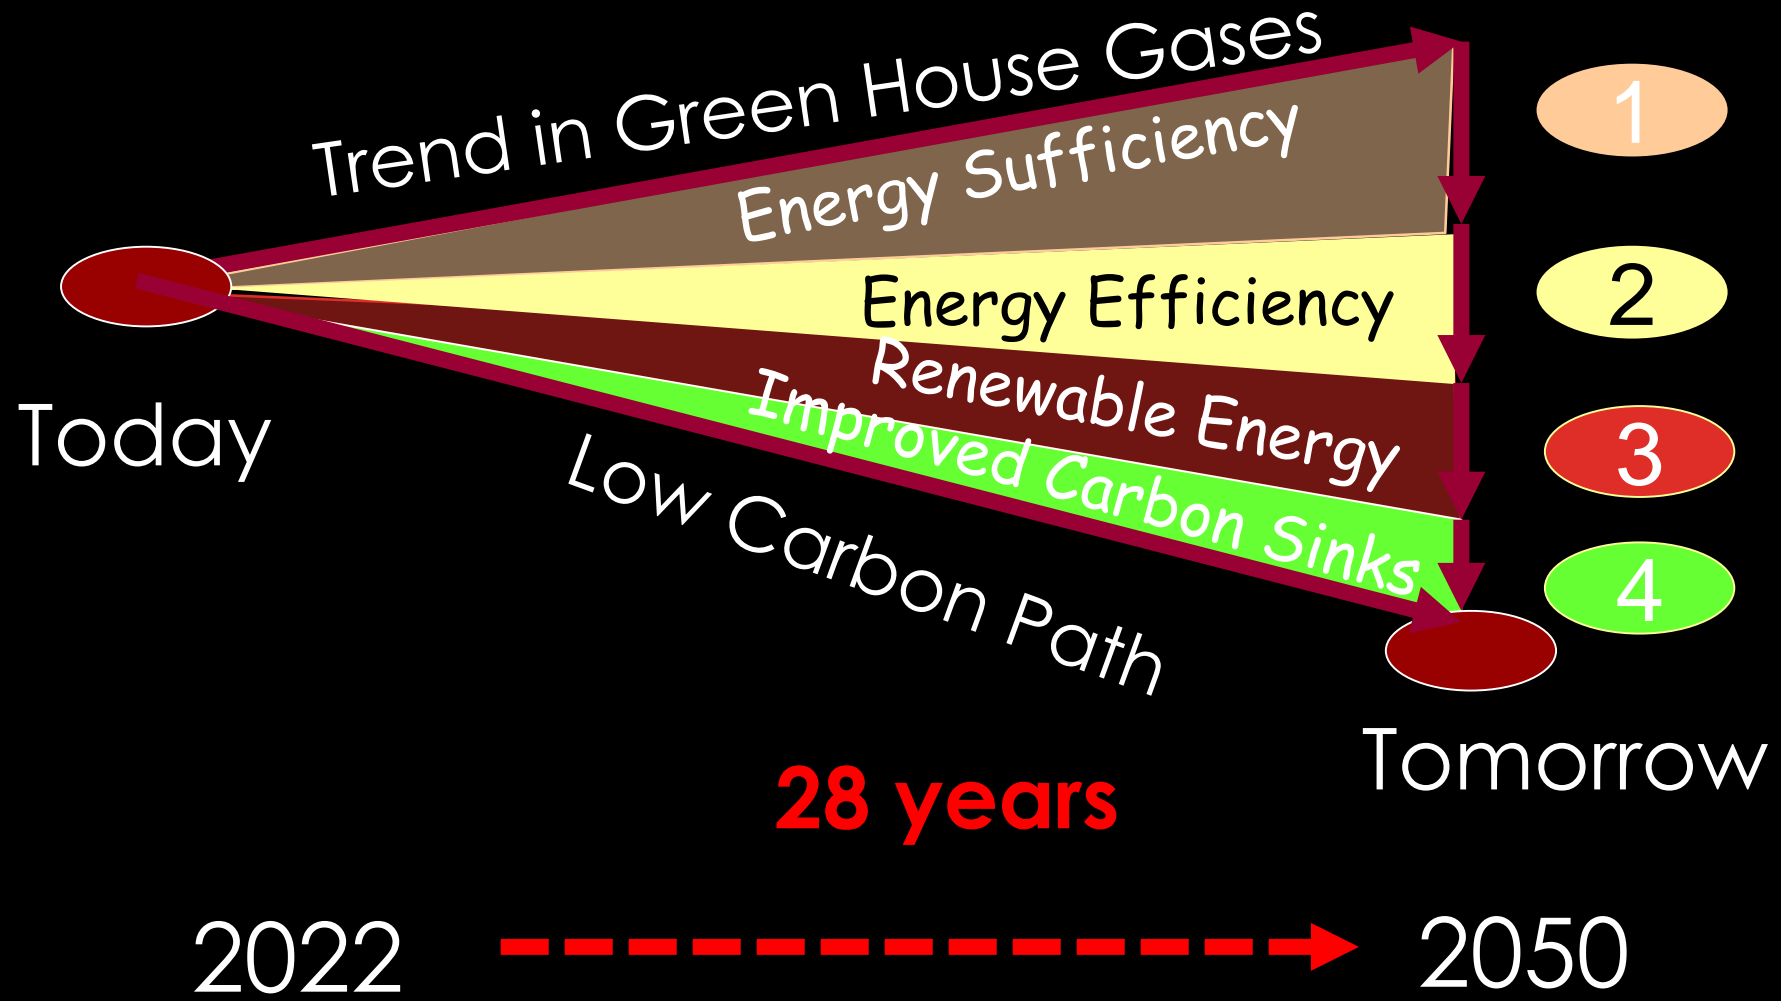

1. Choice of Fuel
2. Energy Performance
3. Ecodriving, car use, behavior
4. Manufacturing & materials

Greenhouse
Gases

Four wedges for a low carbon development

Ultra-light vehicle (700 kg), 50% less energy
Composite material for body & chassis

Energy Energy in the Energy Transition “Ds”

- Demand-driven
- De-coupling
- De-carbonization
- Disruptive
- De-silos
- De-centralize
- Digitalization
- Desirable

Thank you
