

Proposal to postpone the consideration of document ECE/TRANS/WP.29/GRVA/2023/3

The experts from the International Association of the Body and Trailer Building Industry (CLCCR), the European Association of Automotive Suppliers (CLEPA/MEMA/JAPIA) and the International Organization of Motor Vehicle Manufacturers (OICA) propose to postpone the consideration of document ECE/TRANS/WP.29/GRVA/2023/3 by GRVA.

The subject of e-axles (electrically powered axles) in trailers is complex under both the technical (combination of several electronic systems) and regulatory (horizontal issue affecting several regulations) standpoints. In view of this complexity, Industry believes it appropriate to elaborate a consistent and complete proposal to amend UN R13 internally and to jointly table it at a future GRVA session. CLCCR, CLEPA and OICA welcome any contribution the interested parties wish to share.
