THE PEP

Transport, Health
and Environment
Pan-European Programme

Whilst the linkages between gender and transport have been discussed for decades, progress on implementing a gender perspective in transport policies has been slow. This slow-moving pace has been more acute for policies that integrate the three elements of transport, health and the environment. Indeed, transportation and mobility policies often fail to take into consideration gender perspectives, whilst the transport industry is dominated by a male workforce. With these issues in mind, the Transport, Health and Environment Pan-European Programme is seeking to take greater action in integrating a gender perspective in transport policies, in order to accelerate the transition to a sustainable, healthy and equal transport and mobility sector.

PROGRAMME

OPENING REMARKS

Olga Algayerova, Executive Secretary of the UNECE
