Transition to new light duty vehicle emission rules for Australia

Presented by Matthew Cox, Land Transport Emissions and Environment Team

Australia's current plan

- Australia has been planning to implement 'Euro 6d' equivalent requirements for light duty vehicles from 2025.
- Many manufacturers supplying vehicles to Australia rely on UN type approval arrangements for Australian models.
- Since the January session of GRPE, concerns have been raised that the UN Regulation for RDE and R83.08 will not provide a UN type approval pathway for Euro 6d vehicles.
- To resolve this, Australia would like to work with other contracting parties to add a UN type approval pathway for Euro 6d vehicles to these new regulations.
