Abstract

The .Stat Suite <https://siscc.org/stat-suite/> is a standard-based, componentised, open source platform for the efficient production and dissemination of high-quality statistical data where the Statistical Information System Collaborate Community (SIS-CC) <https://siscc.org/> takes a strong role in involving all stakeholders and their users benefiting of not only sharing experiences, but forging a vision together, conducive to joint co-innovation and co-investment plans leading to better direct innovation efforts and better informed decisions. A systematic User-Centered Design approach well integrated process involves a variety of research and design techniques and tools that allows evidence-based developments and happy journeys for users with an optimize usability, look & feel, accessibility and interactivity in .Stat Suite. Focusing in what adds massive value and having a constant measurement, analysis and communication are essential to succeed connecting team, products and business goals.
