TOWARDS MORE COHERENT CLIMATE CHANGE DATA
ECOSYSTEMS – LESSONS LEARNED FROM THE CARIBBEAN

UNECE Expert Forum for Producers and Users of Climate Change-related Statistics
August 2023

Paz Patino, Karina Cazarez, PARIS21
ABOUT PARIS21

PARIS21 promotes the better use and production of statistics in low- and middle-income countries. Founded in 1999 by the United Nations, the European Commission, the Organisation for Economic Co-operation and Development, the International Monetary Fund and the World Bank.

OUR VISION
Better data for better lives for all - a world where all countries produce and use high-quality data and statistics to advance sustainable development

OUR MISSION
To put robust data and statistics at the heart of decision-making for sustainable development
PARIS21’s Climate Change Data Ecosystem

What is a CCDE?
It is a community of interacting state and non-state actors, the legal and policy environment in which they operate, and the available information, infrastructure, and technologies to create, transform and use climate-related statistics and data.

PARIS21 Scoping paper: https://paris21.org/ccde

What is the CCDE Approach?
• Process - It is an assessment and a strategic planning process in to assess and prioritise the climate change data and capacity gaps to improve its production, dissemination and use in decision-making.
• Product - It is a strategic planning product to help NSOs & MoEnv to mobilize resources.
• Tool – It is a guiding framework and toolkit for NSOs and MoEnv to work together to assess and design and implement a strategy that strengthens the national CCDE.
### PARIS21’s CCDE Framework

**Mobilizing Climate Change Data Ecosystem Framework**

An action-oriented assessment and action plan for NSOs and CC data actors to mobilise resources

#### Assessing the current CCDE

<table>
<thead>
<tr>
<th>Step</th>
<th>Description</th>
</tr>
</thead>
</table>
| **Step 1 - Prioritizing data demand** | - Identify national climate plans & policies  
- Define core set of priority indicators |
| **Step 2 - Identifying data and capacity gaps** | - Assess data gaps and feasibility  
- Determine key capabilities to improve |
| **Step 3 - Engaging all actors in the CCDE** | - Map strategic NSS and non-state stakeholders  
- Identify potential roles |
| **Step 4 - Strategic planning for an improved CCDE** | - Develop action plan and implementation strategy  
- Launch the action plan |

**Output:**
- NSS Assessment report
- Strategic Plan CCDE
A fragmented climate change data landscape today

Mobilizing the CCDE allows to clarify WHO is doing WHAT, WHERE data exists and HOW these data can be accessed and integrated into a more effective system.
Mobilising the CCDE in Grenada

Initial mapping of CCDE

Main challenges
• Identifying actors beyond the national statistical system
• Identifying & prioritising climate change indicators for the country

Preliminary solutions:
• Validate more comprehensive mapping of the CCDE
• Conduct in-depth assessment of the CCDE
• Develop an action plan integrated into the NSDS

Results feedback survey from participants at the PARIS21 CCDE Workshop in Grenada, March 2023

What was the biggest challenge experienced during the process of assessing the CCDE in Grenada?

Multiple Choice Poll: 19 votes

- Identifying priority indicators - 10 votes (53%)
- Identifying/mapping key stakeholders beyond the NSS - 18 votes (95%)
- Following the steps of the process - 4 votes (21%)
- No major challenges identified - 0 votes (0%)
- Other challenges - 1 vote (5%)

Implementation lead by Grenada’s Central Statistical Office in collaboration with the Ministry of Climate Resilience
• Integrated into the National Strategy for the Development of Statistics (NSDS) process
Further reasons for a CCDE approach

Emerging demands:

• Need for climate change data for reporting exponential growth (BTRs, MRVs, Agenda 2030, etc.)
• Need for climate change data for climate action (NDPs focus on cc, NAPs, subnational dev plans, etc.)
• Need to engage with stakeholders beyond NSS.

Weak CCDE’s → Needs strategic action

• Limited resources and capacity
• Prevailing data gaps
• Low climate change data literacy
• Weak co-ordination
• Lack of legal and regulatory frameworks
Mobilising the CCDE in Belize

Mapped and assessed the CCDE

Main challenges:
• **Role** for NSO on cc reporting process is unclear (What) and unclear mandates MoEnv
• Limited **coordination** between cc data actors & NSO → lack of role understanding
• Lack of **collaboration model** between NSO & NCCO (How)

Key lesson learned:
• A clear **understanding of climate change data** at the country level is critical to mobilize key stakeholders from all relevant sectors
• Learnings from 2030 Agenda can be an initial path to identify possible **collaborations models** with NSOs (e.g., SIB & SDU in Belize)

Preliminary solutions:
• Develop action plan to improve climate change data production and use
• Integrate the action plan into the NSDS

Launch workshop May 2023

PARIS21 is supporting the Statistical Institute of Belize (SIB) to develop their NSDS and as part of this process to assess and develop an action plan to strengthen the country’s Climate Change Data Ecosystem (CCDE) in close collaboration with the National Climate Change Office and the Department of Environment.
RECOMMENDATIONS

Learn from collaborations with NSOs emerged from the 2030 Agenda

Integrate climate change data in national policies/plans

Identify climate change coordination mechanisms

Need to prioritize climate change data demand – user centric/capacity & resource-responsive

Build capacity of the NSS - not only of NSO or specific Ministries
THANK YOU!
