

## Proposal for an editorial change to document GRE/2023/24

Submitter: IEC

Proposal in **yellow highlight**

*Paragraph 3.3.3.3.*, amend to read:

"3.3.3.3. The colour of the light emitted shall be measured by the method specified in Annex 5. Each measured value shall lie within the required chromaticity area.<sup>11</sup> Moreover, in the case of filament light sources emitting white light, the measured values shall not deviate more than 0.020 unit in the x and/or y direction from a point of choice on the Planckian locus (CIE 015 :2018, 4<sup>th</sup> edition). Filament light sources for use in light signalling devices shall meet the requirements as specified in paragraph 4.4.2. of IEC Publication 60809, Edition **34:2021**."

### Justification

By adding the year of publication, i.e. 2021 after the reference, it is easier for the reader / user of this regulation to identify the correct version of the standard. See also the IEC webstore screen-shot

### IEC 60809:2021

Lamps and light sources for road vehicles - Dimensional, electrical and luminous requirements

TC 34/SC 34A | [Additional information](#)

---

**Abstract** PREVIEW

IEC 60809:2021 is applicable to electric light sources for use in automotive applications, for example in road illumination devices and/or light signalling devices for road vehicles.

It is especially applicable to light sources listed in UN Resolution R.E.5 and light sources subject to other legislations.

This fourth edition cancels and replaces the third edition published in 2014, Amendment 1:2017, Amendment 2:2017 and Amendment 3:2019. This edition constitutes a technical revision.
