

# **NTM System of the Kyrgyz Republic**

- Introduction
- Cooperation with UNCTAD
- Architecture of the NTM system
- System components
- User interfaces
- Implementation of the NTM
- Further Development Plans

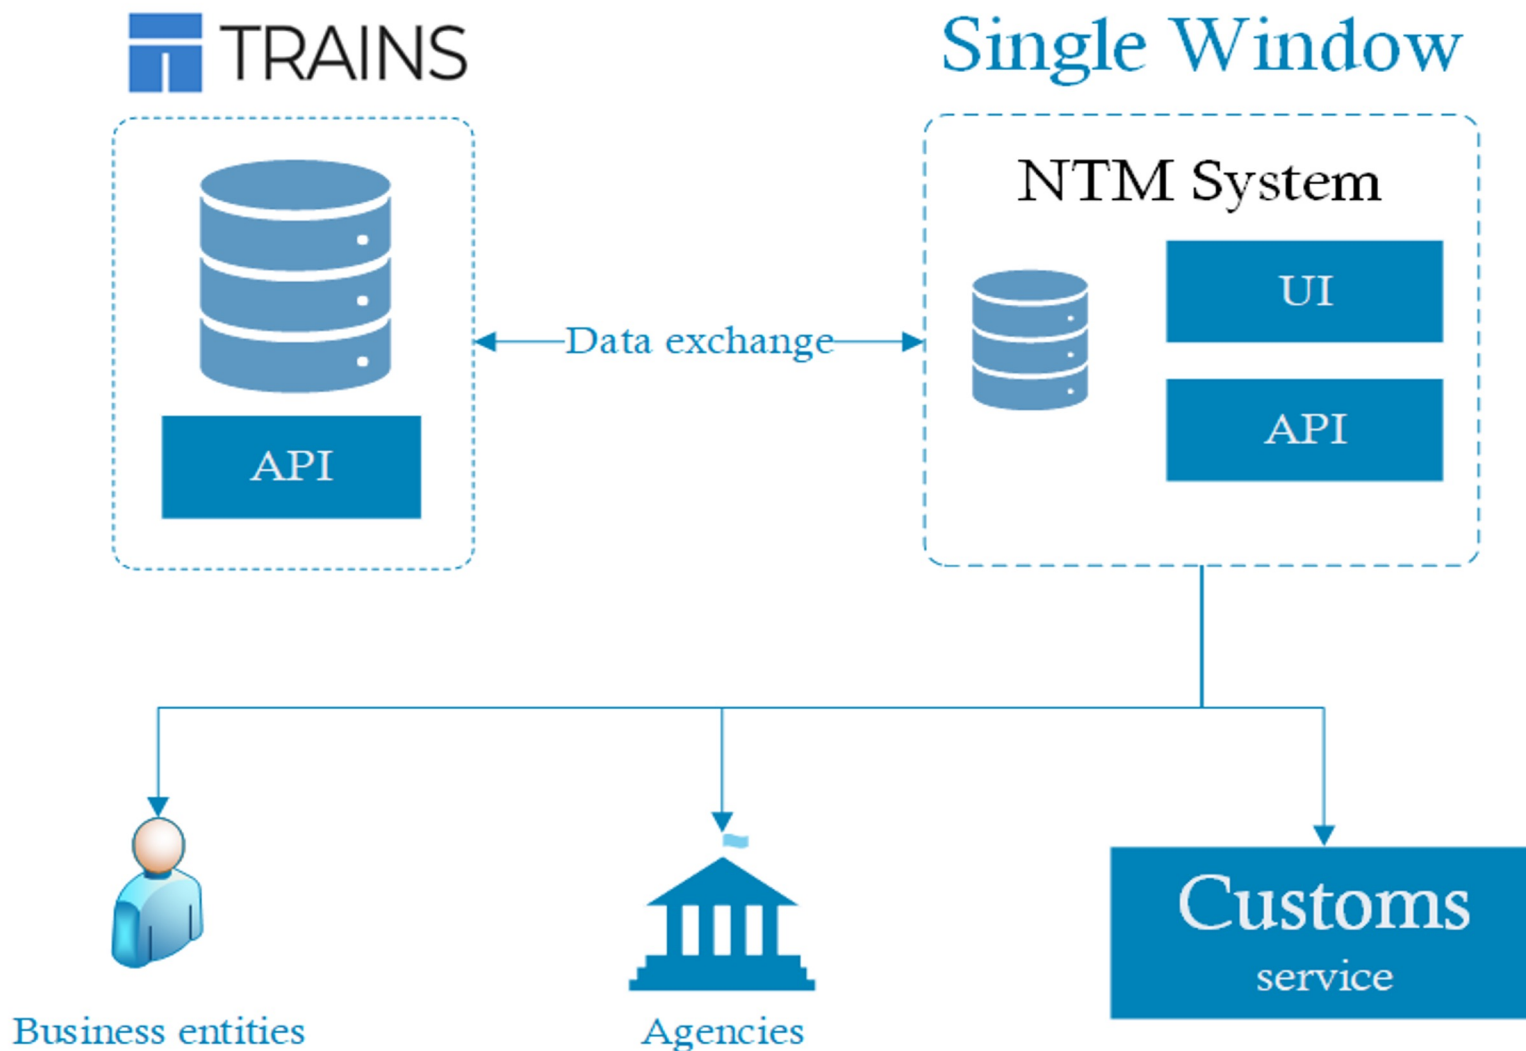

National expert team completed UNCTAD Training Course on Application of the Classification System (March 2017)

From May to October 2017, data collection for the NTM database.

More than 2500 documents were studied from 4 sources, of which 100 relevant documents were identified.

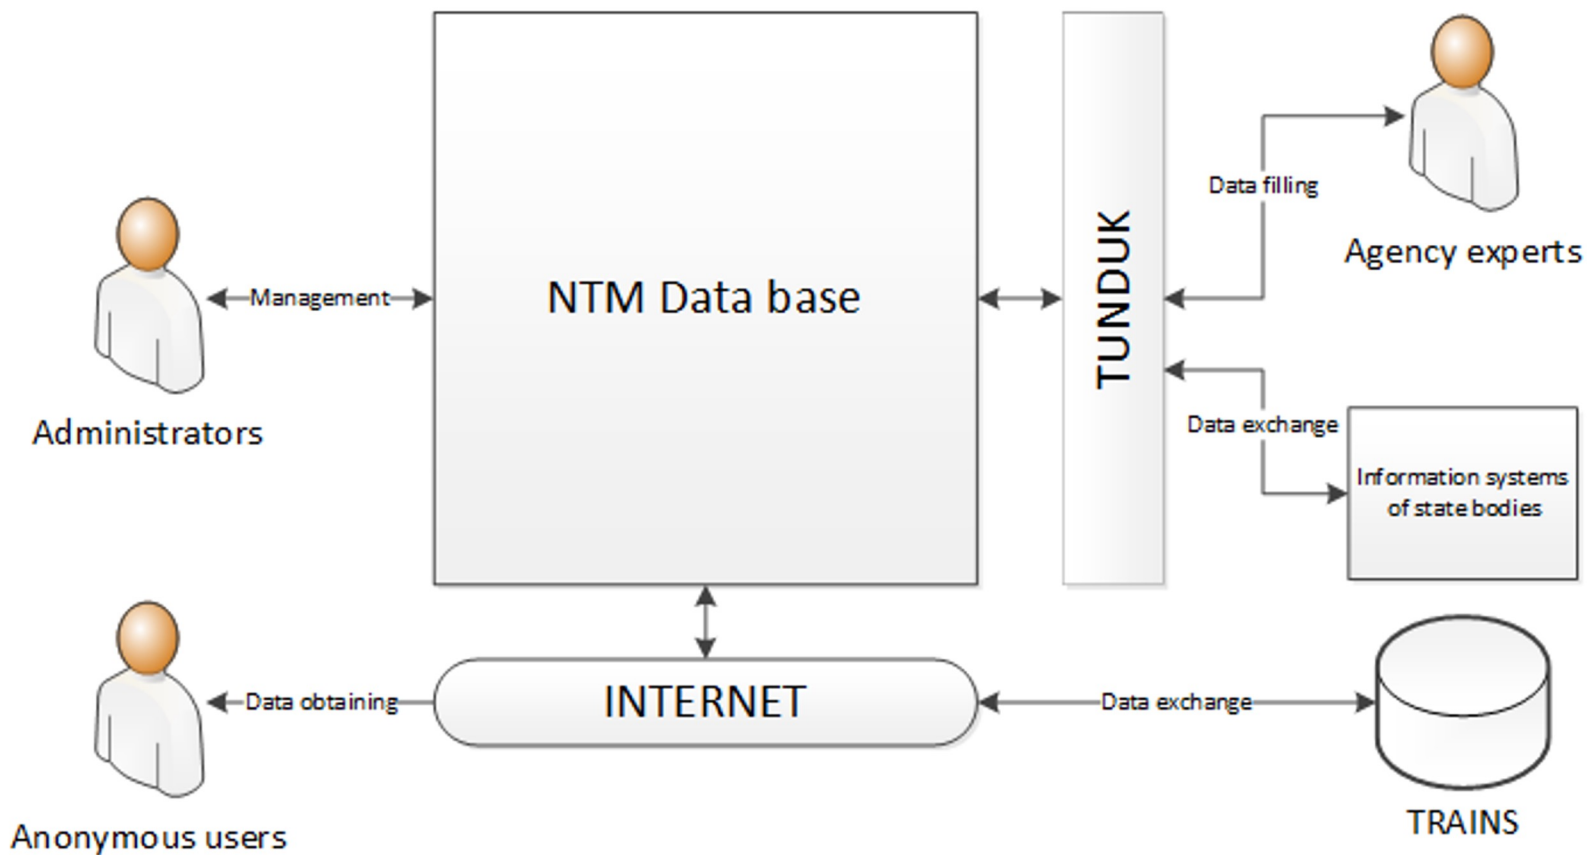

After a detailed analysis and updating, 55 documents were included in the final report.

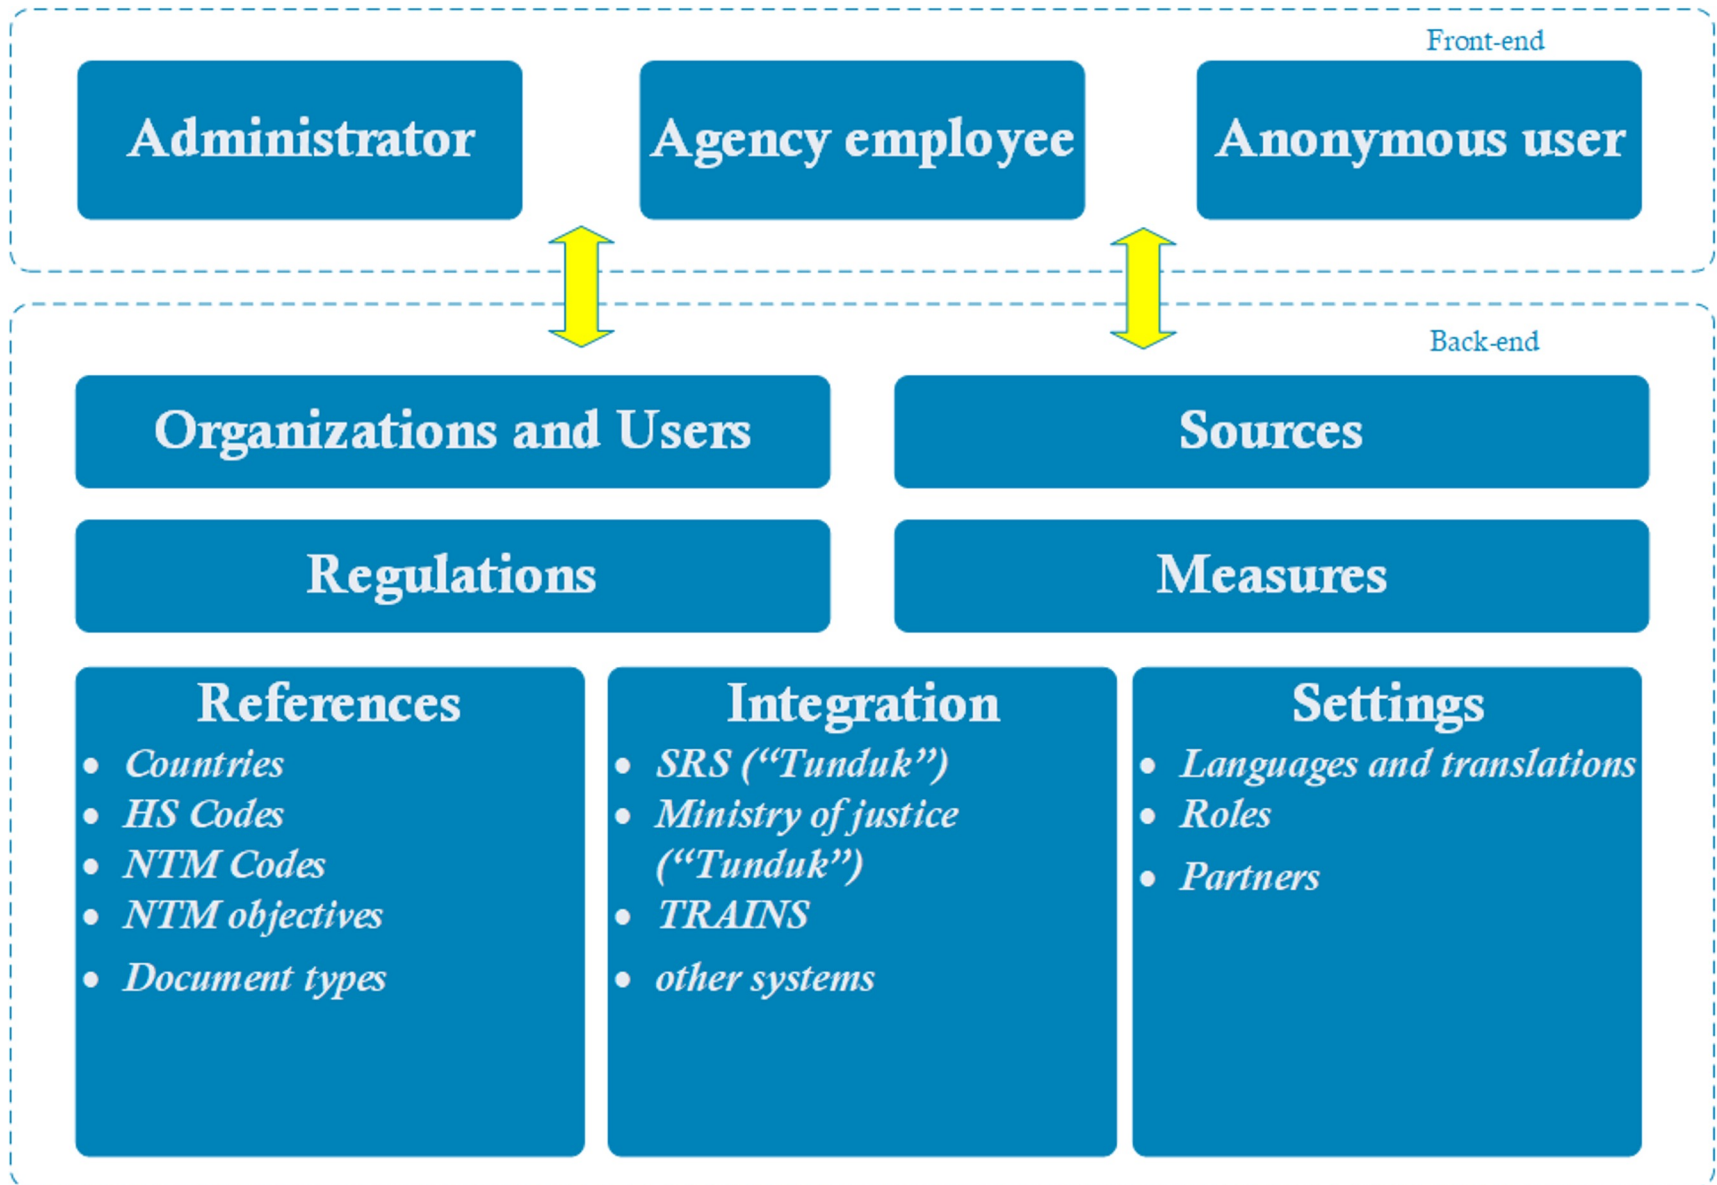

❖ UI - User interface, API - Application programming interface

The screenshot shows the public website for the NTM system of the Kyrgyz Republic. The header features the NTM logo, a language selector set to 'English', and a search bar with a dropdown menu for 'HS Codes' and a search input field. The main content area is a grid of six white cards on a blue background, each with an icon and a title: 'Measures' (ruler icon), 'Regulations' (folder icon), 'HS Codes' (document icon), 'NTM Codes' (code icon), 'Organizations' (people icon), and 'About NTM' (document icon). A vertical sidebar on the left contains a menu icon and several smaller icons representing different site functions.

- About NTM**  
Information and reference system of non-tariff regulatory measures

Development of the NTM system has been completed and it is able to carry out the following functions:

- I. Allows authorized agencies to add and modify NTM data
- II. Act as the primary source of NTM data for government agencies and stakeholders
- III. Exchange data with the international database TRAINS
- IV. Inform traders about existing measures in Kyrgyzstan and other countries.

**Updating the NTM database**

**Obtaining data for other countries from the TRAINS database**

**Business processes analysis of the veterinary and phytosanitary service in terms of preliminary information and risk management**

**Development of learning portal (system) according to the UNCTAD NTM classification methodology**
