

UNECE WP.6 START
Project on the revision of Recommendation L

Draft for Public Review as of: 5 April. 2024

International Model for Product/Service Conformity Based on Transnational Regulatory Cooperation

Disclaimer

ECE draws attention to the possibility that the practice or implementation of its deliverables (which include but are not limited to standards, recommendations, norms, guidelines and technical specifications) may involve the use of a claimed intellectual property right. Each output is based on the contributions of participants in the ECE Working Party 6 (WP.6) deliverable development process, who have acknowledged that all new intellectual property rights generated belong to ECE and have also agreed to waive enforcement of their existing intellectual property rights used in the WP.6 deliverables against any party using the outputs.

ECE takes no position concerning the evidence, validity or applicability of any claimed intellectual property right or any other right that might be claimed by any third parties related to the implementation of its outputs. ECE makes no representation that it has made any investigation or effort to evaluate any such rights.

Part I: Recommendation

1. The Working Party, noting that
 - (a) there is a clear market need from trade and industry and a positive interest from Governments in further reducing trade barriers and facilitating market access and
 - (b) the international model for a common regulatory arrangement (provided in the Annex) developed by the United Nations Economic Commission for Europe (UNECE) provides a voluntary framework for regulatory cooperation that facilitates market access through the use of good regulatory practice and options for establishment of sectoral agreements between interested UN Member States
 - (c) the international model provides good regulatory practices that facilitates global harmonization of national or regional regulations
 - (d) a flexible mechanism for market access of products following relevant international standards and related practices is necessary.
2. Recommends:
 - that regulators use the process outlined in Annex A to develop cooperation based on good regulatory practice in regulatory fields and accompanying trade and industry sectors
 - that countries foresee a mechanism to communicate their adoption of the international model.

Annex A: Principal elements for regulatory harmonization based on good regulatory practice in regulatory fields and accompanying trade and industry sectors.

1. The principal issues to be addressed by interested regulators in a common regulatory arrangement (CRA) document, would include:

- Legitimate regulatory objectives for the public interest, such as public health, safety or environmental protection, etc.;
- Applicable international standards that contain requirements for systems, processes, products and services (hereafter noted as “products and/or services”);
- Ways of assuring and demonstrating compliance with the regulatory objectives;
- Provisions on third party assessment bodies, when recourse to third party assessment is needed;
- Provisions for post-market surveillance.

2. The CRA would specify the following principal elements:

Scope statement

3. A statement of the products and services areas that are covered by the CRA.

4. Regulators should agree on the products and/or services for which legitimate regulatory objectives are required. For this purpose, regulators may use international classification schemes such as the harmonized commodity description and coding system to identify products and/or services.

Requirements on products and/or services

5. Legitimate regulatory objectives reflect the requirements to protect public interest in areas such as human health or safety, animal or plant life or health or the environment. The requirements needed for protection of legitimate objectives should lay down the principal issues of concern and be specified in terms of performance requirements rather than design or descriptive characteristics. Requirements should be limited to relevant aspects and be proportionate to the hazard inherent in a given product and/or services area.

6. The detailed provisions on how to meet the requirements of the regulatory objectives should preferably be specified in applicable international standards. Applicable international standards which can assist in meeting these regulatory objectives partially or in whole should be listed.

Compliance clause

7. The CRA should contain a provision on how compliance is demonstrated. The CRA may contain a provision that products and/or services complying with the referenced international standards are presumed to comply with the requirements.

8. Regulators should agree on the range and contents of possible conformity assessment procedures that are considered to give the necessary level of protection under the CRA. The CRA should also specify the conditions under which suppliers can make a choice if more than one option is provided for. Such options are, for instance, self-declaration of conformity, third party certification or inspection or service agreement. When applicable, such as for high-risk products and/or services, this could be registered within a national (or regional) registry/ies and could be accessed by other Member States which accept the CRA.

9. In considering such options regulators should aim to avoid duplicative conformity assessment testing and certification for products (and replacement parts that are included in the product certification) that add unnecessary costs and time delays.

10. When applicable, the CRA should also contain provisions on the conformity assessment bodies that are recognized to assess and attest compliance as well as the competence criteria to be fulfilled by such bodies.

Market surveillance clause

11. Regulators having agreed on CRA are responsible for market surveillance on their territory and have the right to withdraw products and/or services from their markets if these are not in compliance with the CRA.

12. The CRA should contain a provision (protection clause) that if products and/or services claiming conformity with the CRA that do not conform to its requirements, the regulator may, with the intention to preserve legitimate objectives, withdraw such a product and/or service from its market. Furthermore, the CRA should contain a provision that the regulator using the protection clause should state specifically what products and/or services have been removed from the market and what requirements of the CRA have been claimed to be met but have not been met.

13. In a case where products and/or services are in conformity with the CRA or the applicable international standard but are still found to endanger legitimate objectives, the regulator having agreed on a CRA could withdraw such products and/or services from the market or restrict free circulation. In this case, the use of the protection clause should also be subject to the condition that the regulator using it should indicate the reasons for this decision.
