Economic Commission for Europe
Inland Transport Committee
World Forum for Harmonization of Vehicle Regulations
193rd session
Geneva, 25–28 June 2024
Item 4.7.1. of the provisional agenda
1958 Agreement:
Consideration of draft amendments to existing
UN Regulations submitted by GRPE

Proposal for Supplement 12 to the 05 series of amendments to
UN Regulation No. 49 (Emissions of compression ignition and positive ignition (LPG and CNG) engines)

Submitted by the Working Party on Pollution and Energy*

The text reproduced below was adopted by the Working Party on Pollution and Energy (GRPE) at its ninetieth session (ECE/TRANS/WP.29/GRPE/90, para. 39). It is based on ECE/TRANS/WP.29/GRPE/2024/13. It is submitted to the World Forum for Harmonization of Vehicle Regulations (WP.29) and to the Administrative Committee (AC.1) for consideration at their June 2024 sessions.

* In accordance with the programme of work of the Inland Transport Committee for 2024 as outlined in proposed programme budget for 2024 (A/78/6 (Sect. 20), table 20.5), the World Forum will develop, harmonize and update UN Regulations in order to enhance the performance of vehicles. The present document is submitted in conformity with that mandate.
Paragraph 1.1., amend to read:

³ According to the requirements of Annex 11.
⁴ Hydrogen fuel specified by paragraph 4.6.3.3. (a) or (c)
⁵ Hydrogen fuel specified by paragraph 4.6.3.3. (b) or (d)
⁶ Measurement of CH₄ and CO₂ is not required and the manufacturer, technical service or Type Approval Authority may choose to measure the total hydrocarbon (THC) emissions instead of measuring the non-methane hydrocarbon emissions.”

Paragraph 2.1.37., amend to read:

"2.1.37. Gas engine” means a positive-ignition engine which is fuelled with NG, LPG or H2 show in paragraph 4.6.3.3.(a) (T) or 4.6.3.3.(b) (TD);"
Paragraph 2.2.2., amend to read:

"2.2.2. Symbols for chemical component

CH₄    Methane
C₂H₆   Ethane
C₂H₅OH  Ethanol
C₃H₈   Propane
CO     Carbon Monoxide
DOP    Di-Octylphtalate
CO₂    Carbon Dioxide
H₂      Hydrogen
HC     Hydrocarbons
NMHC   Non-Methane Hydrocarbons
NOₓ    Oxides of Nitrogen
NO     Nitric Oxide
NO₂    Nitrogen Dioxide
O₂     Oxygen
PT     Particulates"

Paragraph 2.2.4., amend to read:

"2.2.4. Symbols for the fuel composition

wᵦ₁     Hydrogen content of fuel, per cent mass
wᵦ₂     Carbon content of fuel, per cent mass
wᵦ₃     Sulphur content of fuel, per cent mass
wᵦ₄     Nitrogen content of fuel, per cent mass
wᵦ₅     Oxygen content of fuel, per cent mass
α       Molar hydrogen ratio
β       Molar carbon ratio
γ       Molar sulphur ratio
δ       Molar nitrogen ratio
ε       Molar oxygen ratio

referring to a fuel C₀ H₀ O₀ N₀ S₀
β = 1 for carbon based fuels, β = 0 for hydrogen fuel"

Paragraph 2.2.4., amend to read:

"2.2.5. Standards referenced by this Regulation

ISO 15031-1  ISO 15031-1: 2001 Road vehicles - Communication between vehicle and external equipment for emissions related diagnostics - Part 1: General information.

ISO 15031-2  ISO/PRF TR 15031-2: 2004 Road vehicles - Communication between vehicle and external equipment for emissions related diagnostics - Part 2: Terms, definitions, abbreviations and acronyms."

ISO 15031-5  ISO DIS 15031-5.4: 2004 Road vehicles - Communication between vehicle and external equipment for emissions related diagnostics - Part 5: Emissions-related diagnostic services.

ISO 15031-6  ISO DIS 15031-6.4: 2004 Road vehicles - Communication between vehicle and external equipment for emissions related diagnostics - Part 6: Diagnostic trouble code definitions.

ISO 15031-7  ISO 15031-7: 2001 Road vehicles - Communication between vehicle and external equipment for emissions related diagnostics - Part 7: Data link security.

ISO 15765-4  ISO 15765-4: 2001 Road vehicles - Diagnostics on Controller Area Network (CAN) - Part 4: Requirements for emissions-related systems.

SAE J1939  SAE J1939: Recommended Practice for a Serial Control and Communications Vehicle Network.

*Insert a new paragraph 3.5.*, to read:

"3.5. Application for type approval of engines fuelled with hydrogen

3.5.1. In case of an application for type approval of engines fuelled with hydrogen, hydrogen shall be the fuel the engine is designed to run on primarily. Requirements for dual-fuel hydrogen engines have not yet been established under this regulation.”
Paragraph 4.1.1., amend to read:

"4.1.1. In the case of diesel, ethanol, LNG20, or Hydrogen fuel the parent engine meets the requirements of this Regulation on the reference fuel specified in Annex 5."

Insert a new paragraph 4.6.3.3., to read:

"4.6.3.3. For hydrogen fuelled engines the approval mark shall contain a letter(s) after the national symbol, the purpose of which is to distinguish the fuel type and the working principal for which the approval has been granted. This letter(s) will be as follows:

(a) T in case of a PI engine being approved and calibrated for gaseous hydrogen
(b) TD in case of a CI engine being approved and calibrated for gaseous hydrogen
(c) U in case of a PI engine being approved and calibrated for liquefied hydrogen
(d) UD in case of a CI engine being approved and calibrated for liquefied hydrogen"

Insert a new paragraph 5.1.10., to read:

"5.1.10. Provisions for engines fuelled with hydrogen
5.1.10.1. In case of an application for type approval of engines fuelled with hydrogen, the emission measurement system shall comply with the highest exhaust water content expected during emission testing. In particular it shall be ensured that the temperatures of all sample gas carrying components of the emission measurement system, except for sample dryers, remain at least 10 K above the dew point of the sample gas at the corresponding position."

Paragraph 5.2.1., amend to read:

"5.2.1. Limit values

The specific mass of the carbon monoxide, of the total hydrocarbons, of the oxides of nitrogen and of the particulates, as determined on the ESC test, and of the smoke opacity, as determined on the ELR test, shall not exceed the amounts shown in Table 1.

The specific mass of the carbon monoxide, of the non-methane hydrocarbons, of the methane, of the oxides of nitrogen and of the particulates as determined on the ETC test shall not exceed the amounts shown in Table 2.

Table 1

*c For engines having a swept volume of less than 0.75 dm³ per cylinder and a rated power speed of more than 3,000 min⁻¹
*d For engines where all the fuels used have a molar carbon to hydrogen ratio of 0 as defined in paragraph 8. of Annex 4A, the measurement of CH₄ is not required and the manufacturer, technical service or Type Approval Authority may choose to measure the total hydrocarbon (THC) emissions instead of measuring the non-methane hydrocarbon emissions. In that case, the emission limit for the total hydrocarbon emissions is the same as shown in paragraph 5.2. of this Regulation for non-methane hydrocarbon emissions."

Paragraph 7.2.1., amend to read:

"7.2.1. CI engines"

Paragraph 7.2.2., amend to read:

"7.2.2. PI engines"

Insert a new paragraph 8.3.2.6., to read

"8.3.2.6. For hydrogen fuelled engines, all these tests may be conducted with the applicable market fuels. However, at the manufacturer’s request, the reference fuels described in Annex 5 to this Regulation may be used."

Paragraph 8.3.2.6., amend to read:

"8.3.2.7. Tests for conformity of production of a gas fuelled engine laid out for operation on one specific fuel composition shall be performed on the fuel for which the engine has been calibrated."

Annex 1, amend to read:

"Annex 1. Information document

This information document is related to the approval according to Regulation No. 49. It is referring to measures to be taken against the emission of gaseous and particulate pollutants from compression-ignition engines include fuelled with hydrogen(TD/UD) for use in vehicles, and the emission of gaseous pollutants from positive-ignition engines fuelled with natural gas liquefied petroleum gas hydrogen(T/U) for use in vehicles.

Vehicle type/parent engine/engine type¹

0. General
0.1. Make (name of undertaking):
0.2. Type and commercial description (mention any variants):
0.3. Means and location of identification of type, if marked on the vehicle:
0.4. Category of vehicle (if applicable):
0.5. Category of engine: diesel/NG fuelled/LPG fuelled/ethanol fuelled /hydrogen fuelled¹
0.6. Name and address of manufacturer:
0.7. Location of statutory plates and inscriptions and method of affixing:
0.8. In the case of components and separate technical units, location and method of affixing of the ECE approval mark:
0.9. Address(es) of assembly plant(s):

Annex 1- Appendix1, paragraph 1.14., amend to read:
"1.14. Fuel: Diesel/LPG/NG-H/NG-L/NG-\text{HL}/ethanol /LNG /LNG_{30} /\text{Hydrogen (T)} /\text{Hydrogen (TD)} /\text{Hydrogen (U)} /\text{Hydrogen (UD)}^{2,5}\"

Annex 1- Appendix1, paragraph 3.1., amend to read:
"3.1. Compression-ignition (C.I.) engines, including dual-fuel engines"

Annex 1- Appendix1, paragraph 3.2., amend to read:
"3.2. Positive-ignition (P.I.) engines, including dual-fuel engines"

Annex 1- Appendix1, paragraph 9.3., amend to read:
"9.3. Compression-ignition (C.I.) / positive-ignition (P.I.) engines"

Annex 1- Appendix2, paragraph 2.1., amend to read:
"2.1. Name of compression-ignition (C.I.) engine family:"

Annex 1- Appendix2, paragraph 2.2., amend to read:
"2.2. Name of positive-ignition (P.I.) engine family:"

Annex 1- Appendix3, paragraph 1.14., amend to read:
"1.14. Fuel: Diesel/LPG/NG-H/NG-L/NG-\text{HL}/ethanol/LNG/LNG_{30} /\text{Hydrogen (T)} /\text{Hydrogen (TD)} /\text{Hydrogen (U)} /\text{Hydrogen (UD)}^{2,5}\"

Annex 1- Appendix3, paragraph 3.1., amend to read:

\hline
\end{tabular}
\end{table}\"
Annex 2A, foot note, amend to read:

"1 Distinguishing number of the country which has
granted/extended/refused/withdrawn approval (see approval provisions in the
Regulation).
2 Strike out what does not apply.
3 For each member of the family.
4 For engines where all the fuels used have a molar carbon to hydrogen ratio of 0 as
defined in paragraph 8. of Annex 4A, the measurement of CH4 is not required and the
manufacturer, technical service or Type Approval Authority may choose to measure the
total hydrocarbon (THC) emissions instead of measuring the non-methane hydrocarbon
emissions. In that case, the emission limit for the total hydrocarbon emissions is the
same as shown in paragraph 5.2. of this Regulation for non-methane hydrocarbon
emissions."

Annex 2B, paragraph 9.4., amend to read:

"|
---|---|---|---|---|---
**ETC test** |  |  |  |  |  |
**DF:** |  |  |  |  |  |
**Emissions:** | CO | NMHC | CH4 | NOx | PT |
| Measured with regeneration: |  |  |  |  |  |
| Measured without regeneration: |  |  |  |  |  |
| Measured/weighted: |  |  |  |  |  |
| Calculated with DF: |  |  |  |  |  |

Annex 2B, foot note, amend to read:

"1 Distinguishing number of the country which has
granted/extended/refused/withdrawn approval (see approval provisions in the
Regulation).
2 Strike out what does not apply.
3 For engines where all the fuels used have a molar carbon to hydrogen ratio of 0 as
defined in paragraph 8. of Annex 4A, the measurement of CH4 is not required and the
manufacturer, technical service or Type Approval Authority may choose to measure the
total hydrocarbon (THC) emissions instead of measuring the non-methane hydrocarbon
emissions. In that case, the emission limit for the total hydrocarbon emissions is the
same as shown in paragraph 5.2. of this Regulation for non-methane hydrocarbon
emissions."

Annex 4A, Appendix 1, paragraph 5., amend to read:

"5. Calculation of the gaseous emissions

Calculation of hydrocarbons and/or non-methane hydrocarbons is based on the
following molar carbon/hydrogen/oxygen ratios (C/H/O) of the fuel:
CH1.85 for diesel,
CH3O0.5 for ethanol for dedicated C.I. engines,
CH2.525 for LPG (liquefied petroleum gas),
CH2.93 for NG (Non-Methane Hydrocarbons (NMHC)).
CH4 for NG
H2 for hydrogen."
Annex 4A, Appendix 1, paragraph 5.2., amend to read:

"5.2. Dry / wet correction

The measured concentration shall be converted to a wet basis according to the following formulae, if not already measured on a wet basis. The conversion shall be done for each individual mode.

The \( u_{m,\text{at}} \)-values and molar ratios as described in paragraphs A.5.2. and A.5.3. of Appendix 5 to Annex 11 shall be used for dual-fuel engines, operating in dual-fuel mode,

\[
c_{\text{wet}} = k \times c_{\text{dry}}
\]

For the raw exhaust gas:

(a)

\[
k_{w,r} = \left( \frac{1.2442 \times H_s + 111.19 \times \text{w}_{\text{ALF}} \times \frac{q_{\text{mf}}}{q_{\text{mad}}} - \frac{q_{\text{mf}}}{q_{\text{mad}}} \times k_f \times 1000}{773.4 + 1.2442 \times H_s + \frac{q_{\text{mf}}}{q_{\text{mad}}} \times k_f \times 1000} \right) \times 1.008
\]

or:

(b)

\[
k_{w,r} = \left( \frac{1.2442 \times H_s + 111.19 \times \text{w}_{\text{ALF}} \times \frac{q_{\text{mf}}}{q_{\text{mad}}} - \frac{q_{\text{mf}}}{q_{\text{mad}}} \times k_f \times 1000}{773.4 + 1.2442 \times H_s + \frac{q_{\text{mf}}}{q_{\text{mad}}} \times k_f \times 1000} \right)^{1 - \frac{p_r}{p_b}}
\]

or:

(c)

\[
k_{w,a} = \left( \frac{1}{1 + \alpha \times 0.005 \times (c_{\text{CO}_2} + c_{\text{CO}})} - k_{w_1} \right) \times 1.008
\]

with

\[
k_f = 0.055594 \times \text{w}_{\text{ALF}} + 0.0080021 \times \text{w}_{\text{DEL}} + 0.0070046 \times \text{w}_{\text{EPS}}
\]

and

\[
k_{w_1} = \frac{1.608 \times H_s}{1.000 + (1.608 \times H_s)}
\]

Where:

- \( H_s \) = intake air humidity, g water per kg dry air
- \( \text{w}_{\text{ALF}} \) = hydrogen content of the fuel, per cent mass
- \( q_{\text{mf},i} \) = instantaneous fuel mass flow rate, kg/s
- \( q_{\text{mad},i} \) = instantaneous dry intake air mass flow rate, kg/s
- \( p_r \) = water vapour pressure after cooling bath, kPa
- \( p_b \) = total atmospheric pressure, kPa
- \( \text{w}_{\text{DEL}} \) = nitrogen content of the fuel, per cent mass
- \( \text{w}_{\text{EPS}} \) = oxygen content of the fuel, per cent mass
- \( \alpha \) = molar hydrogen ratio of the fuel
\[ c_{\text{CO}_2} = \text{dry CO}_2 \text{ concentration, per cent} \]
\[ c_{\text{CO}} = \text{dry CO} \text{ concentration, per cent} \]

(a) and (b) are principally identical with the factor 1.008 in (a) and (c) being an approximation for the more accurate denominator in (b). (c) is not applicable, if one of the fuels used has a molar carbon to hydrogen ratio of 0. (a) to (c) are not applicable in the case that water injection is used.

For the diluted exhaust gas:

(d)

\[ K_{\text{Wel}} = \left( 1 - \frac{\alpha \times \% c_{\text{wCO}_2}}{200} \right) - K_{\text{W1}} \]

or:

(e)

\[ K_{\text{We2}} = \left( \frac{\left( 1 - K_{\text{W1}} \right)}{1 + \frac{\alpha \times \% c_{\text{dCO}_2}}{200}} \right) \]

(d) and (e) are not applicable if one of the fuels used has a molar carbon to hydrogen ratio of 0.

..."

Annex 4A, Appendix I, paragraph 5.5., Table 6, amend to read:

Annex 4A, Appendix 2, paragraph 3., amend to read:

"3. Emissions test run

At the manufacturer's request, a dummy test may be run for conditioning of the engine and exhaust system before the measurement cycle.

NG and LPG and hydrogen fuelled engines shall be run-in using the ETC test. The engine shall be run over a minimum of two ETC cycles and until the CO emission measured over one ETC cycle does not exceed by more than 10 per cent the CO emission measured over the previous ETC cycle."

Annex 4A, Appendix 2, paragraph 4.2.5., amend to read:

"4.2.5. Air flow and air-to-fuel ratio measurement method

This involves exhaust mass calculation from the air flow and the air to fuel ratio. The calculation of the instantaneous exhaust gas mass flow is as follows:

\[ q_{mew,i} = q_{maw,i} \times \left( 1 + \frac{1}{\lambda_i} \right) \]

With:

\[ \frac{A/F_{st}}{\lambda_i} = \frac{138.0 \times (\beta + \frac{\alpha}{2} - \frac{\epsilon}{2} + \gamma)}{12,011 \times \beta + 1,00794 \times \alpha + 15,9994 \times \epsilon + 14,0067 \times 8 + 32,065 \times \gamma} \]

\[ \lambda_i = \frac{\beta \times \left( 100 - \frac{c_{COd} \times 10^{-4}}{2} \times c_{HCw} \times 10^{-4} \right) \times \left( 1 - \frac{2 \times c_{COd} \times 10^{-4}}{\frac{c_{CO2d} \times 10^{10}}{2} - \frac{c_{CO2d}}{2}} \times (c_{CO2d} + c_{COd} \times 10^{-4}) \right) \times 4.76 \times \left( \frac{c_{CO2d} + c_{COd} \times 10^{-4} + c_{HCw} \times 10^{-4}}{c_{CO2d} + c_{COd} \times 10^{-4} + c_{HCw} \times 10^{-4}} \right) \times (c_{CO2} + c_{COd} \times 10^{-4})}{(\beta + \frac{\alpha}{2} - \frac{\epsilon}{2} + \gamma) \times (c_{CO2d} + c_{COd} \times 10^{-4} + c_{HCw} \times 10^{-4})} \]

Where:

\[ A/F_{st} = \text{stoichiometric air to fuel ratio, kg/kg} \]
\[ \beta = \text{the molar carbon ratio of the fuel, with } \beta=1 \text{ for fuels containing carbon and } \beta=0 \text{ for fuels with a molar carbon to hydrogen ratio of 0 as defined in paragraph 4. of this annex.} \]
\[ \lambda_i = \text{excess air ratio calculated by } \lambda_i \text{ or measured by a lambda sensor} \]
\[ c_{CO2} = \text{dry CO}_2 \text{ concentration, per cent} \]
\[ c_{CO} = \text{dry CO concentration, ppm} \]
\[ c_{HC} = \text{HC concentration, ppm} \]

\( \lambda_i \) is not applicable if one of the fuels used has a molar carbon to hydrogen ratio of 0 as defined in paragraph 4. of this annex.

The air flowmeter shall meet the accuracy specifications of paragraph 2.2. of Appendix 4 to this annex, the CO\(_2\) analyzer used shall meet the specifications of paragraph 3.3.2. of Appendix 4 to this annex and the total system shall meet the accuracy specifications for the exhaust gas flow.

Optionally, air to fuel ratio measurement equipment such as a zirconia type sensor may be used for the measurement of the excess air ratio which meets the specifications of paragraph 3.3.6. of Appendix 4 to this annex.

Annex 4A, Appendix 5, paragraph 1.9.1., amend to read:

"1.9.1. CO analyzer interference check

Water and CO\(_2\) can interfere with the CO analyzer performance. Therefore, a CO\(_2\) span gas having a concentration of 80 to 100 per cent of full scale of the maximum operating range used during testing shall be bubbled through water"
at room temperature and the analyzer response recorded. The analyzer response shall not be more than 2 per cent of the mean CO concentration expected during testing or 20 ppm, whichever is larger."

Annex 4A, Appendix 5, paragraph 3.2.2., amend to read:

"3.2.2. Carbon flow check

(a) A carbon flow check using actual exhaust is recommended for detecting measurement and control problems and verifying the proper operation of the partial flow system. The carbon flow check should be run at least each time a new engine is installed, or something significant is changed in the test cell configuration.

(b) The engine shall be operated at peak torque load and speed or any other steady state mode that produces 5 per cent or more of CO$_2$. The partial flow sampling system shall be operated with a dilution factor of about 15 to 1.

(c) If a carbon flow check is conducted, the procedure given in Appendix 6 to this annex shall be applied. The carbon flow rates shall be calculated according to paragraphs 2.1. to 2.3. of Appendix 6 to this annex. All carbon flow rates should agree to within 6 per cent of each other. In the case that a hydrogen fuelled engine is to be tested, the carbon flow check should be performed on a diesel fuelled engine prior to the installation of the hydrogen fuelled engine."

Annex 4A, Appendix 6, paragraph 2.4., amend to read:

"2.4. The molecular mass (M$_{re}$) of the exhaust gas shall be calculated as follows:

\[
M_{re} = \frac{q_{mf}}{q_{nam}} \left[ 1 + \frac{1}{H_a \times 10^{-3}} \left( 1 + \frac{H_a \times 10^{-3}}{1 + H_a \times 10^{-3}} \right) \right]^{-1}
\]

Where:

$q_{mf} = $ fuel mass flow rate, kg/s

$q_{nam} = $ intake air mass flow rate on wet basis, kg/s

$H_a = $ humidity of intake air, g water per kg dry air

$M_{ra} = $ molecular mass of dry intake air (= 28.9 g/mol)

$\alpha, \delta, \varepsilon, \gamma = $ molar ratios referring to a fuel $C_\beta H_\delta O_\varepsilon N_\gamma S_\gamma$.

Alternatively, the following molecular masses may be used:

$M_{re}$ (diesel) = 28.9 g/mol

$M_{re}$ (LPG) = 28.6 g/mol

$M_{re}$ (NG) = 28.3 g/mol."
Annex 5, insert new paragraph 4., to read:

(a) The hydrogen fuel index is determined by subtracting the “total non-hydrogen gases” in this table, expressed in mole per cent, from 100 mole per cent.
(b) Total hydrocarbons except methane include oxygenated organic species.
(c) The sum of measured CO, HCHO and HCOOH shall not exceed 0.2 μmol/mol
(d) As a minimum, total sulphur compounds include H₂S, COS, CS₂ and mercaptans, which are typically found in natural gas.
(e) Test method shall be documented. Test methods defined in ISO21087 are preferable.
(f) The analysis of specific contaminants depending on the production process shall be exempted. A vehicle manufacturer shall provide the responsible authority reasons for exempting specific contaminants.”

Annex 9A, paragraph 3.2.1., amend to read:

"3.2.1. Introduction

From the dates given in paragraph 5.4.2. of this Regulation, the OBD system of all Compression Ignition (hereinafter, this is called “CI”) engines and of vehicles equipped with a CI engine shall indicate the failure of an emission-related component or system when that failure results in an increase in emissions above the appropriate OBD thresholds given in the table in paragraph 5.4.4. of this Regulation.”
Annex 9A, paragraph 3.2.3.1., amend to read:

"3.2.3.1. As an alternative to monitoring against the appropriate OBD threshold limits with respect to paragraphs 3.2.2.1. to 3.2.2.4. of this annex, OBD systems of CI engines may in accordance with paragraph 5.4.1.1. of this Regulation monitor for major functional failure of the following components:

..."

Annex 9A, paragraph 3.3.1., amend to read:

"3.3.1. From the dates given in paragraph 5.4.2. of this Regulation the OBD system of all CI or Positive Ignition (hereinafter, this is called "PI") engines and of vehicles equipped with a CI or a PI engine shall indicate the failure of an emission-related component or system of the engine system when that failure results in an increase in emissions above the appropriate OBD thresholds given in the table in paragraph 5.4.4. of this Regulation.

..."

Annex 9B, paragraph 5.2.3., amend to read:

"5.2.3. Low fuel level

Manufacturers may request approval to disable monitoring systems that are affected by low fuel level / pressure or running out of fuel (e.g. diagnosis of a malfunction of the fuelling system or misfiring) as follows:
(a) The low fuel level considered for such a disablement shall not exceed 100 litres or 20 per cent of the nominal capacity of the fuel tank, whichever is lower.

(b) The low fuel pressure in the tank considered for such a disablement shall not exceed 20 per cent of the usable range of fuel tank pressure.

"Annex 9B, Appendix 3 – Item 6, amend to read:

"Appendix 3 - Item 6

Exhaust Gas Recirculation (EGR) system monitoring

The OBD system shall monitor the following elements of the EGR system on engines so equipped for proper operation:

<table>
<thead>
<tr>
<th>CI engine</th>
<th>PI engine</th>
</tr>
