House Price Index (HPI): Indicator for house price development

May 2005: Kadaster publishes first HPI for the Netherlands. Development in collaboration with financial institutions.

January 2008: revision of HPI methodology. The current indicator in collaboration with Statistics Netherlands. Limited number of municipalities and large regions.

2025: revision of the HPI methodology: target HPIs for all municipalities.
Recognizing underground parking garages
Improving information for the energy transition (VIVET)
- Helping speed up the energy transition and reach climate goals
- A broad collaboration between central government, local government, special units (a.o. Kadaster NL) and data institutes (a.o. Statistics NL)
- Unique: parties decide together what to do using well-articulated questions
Detection of solar panels

*Insight into installed solar panels on roofs*

- CBS inventories solar panels based on administrative sources;
- Kadaster detects solar panels based on image recognition;
- Combining both techniques creates a more complete picture of all installed solar panels in the Netherlands;
- Result: a high-quality dataset.
The impact, benefits and challenges of collaborating are multiple.

In the end it is mainly rewarding!
