

An aerial photograph of a city street with buildings and cars. A semi-transparent dark grey box is overlaid on the left side of the image, containing white text.

Implementation of AI in European National Mapping and Cadastral Agencies

Sallie Payne Snell

Secretary General and Executive Director

UN-GGIM: Europe & CES Common Day, 20 June 2024

CONNECTING YOU TO MAPS, GEOSPATIAL AND LAND INFORMATION FOR EUROPE

#MAPSFOR EUROPE

60+  **members** from the whole of geographical Europe

EUROGEOGRAPHICS ACTIVITIES

Well-established network for sharing knowledge, expertise and access to data

Sharing experiences and best practice

Representing our members' interests

Fostering use and re-use of public sector geo-information

MAPS, CADASTRE, AND MORE

Our members provide data to help protect people, the planet and so much more

Environmental monitoring & management

Real-time data for pandemic response

Smarter, sustainable agriculture

Cleaner, safer, intelligent transport

Emergency responses

Aerial survey

TRUST & RELIABILITY

Our members empower society with trusted geospatial services

Trusted daily everywhere for secure ownership transactions, diligent policy elaboration and monitoring

Relied on by European institutions and UN, governments, businesses and citizens

Registered on the EU Transparency Register and bound by its code of conduct

AI in National Mapping, Cadastral and Land Registration Authorities

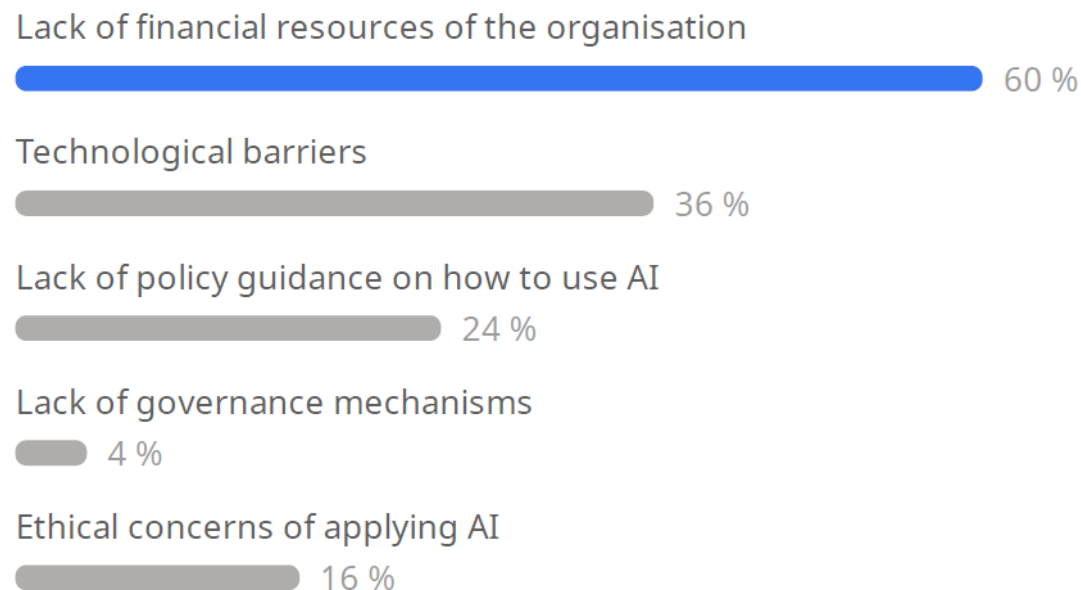

- EuroGeographics worked in collaboration with EuroSDR
- Organised three online workshops in three years: 2021, 2022, 2023
- The workshops took a holistic view of the implementation of AI: policy frameworks, research trends and experiences of implementing AI
- Brought together staff members of NMCAs, researchers at NMCAs and academic institutions, policy people and software developers
- A total audience of about 500 across the three workshops

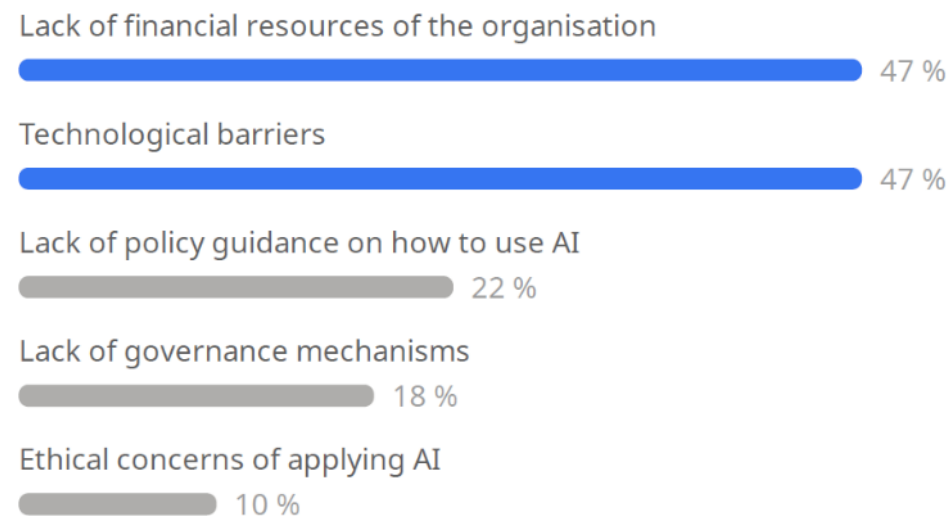

Highlights of some trends from the workshop

- NMCAs view AI as an opportunity rather than a threat, but have become more weary of the hype with time - going from 99% in 2021 to 86% in 2023
- NMCAs still consider the maturity of AI in their organisations as low: 63% in 2021 to 57% in 2023
- The drivers for implementing AI in NMCAs are mainly Cost/Time savings and More efficient business processes, quality is not a prime driver and has not changed in three years – decreasing from 36% to 31% from 2021 to 2023. AI was seen as an innovation in 2021 (62%) and less so by 2023 (22%)
- Machine learning and Computer vision are the top two AI technology most relevant for NMCAs
- NMCAs see themselves as both users and suppliers in the AI cycle

In your view which will be the main barriers that NMCAS are facing when implementing AI solutions in the near future?

October 2022

September 2023

AI will totally disrupt the working processes at NMCA's

October 2022

September 2023

AI will have a significant impact NMCA business models

October 2022

September 2023

Trust and governance are important

What do you think about the main risks of using AI at NMCAs?

Thinking about the (future) use of AI by NMCAs, which risk levels do you envisage?

Unacceptable risk

0 %

High risk

0 %

AI with specific transparency obligations

89 %

Minimal or no risks

11 %

Which geospatial issues should AI policy take into account?

NMCA's outlook of AI

- Routine
- In the future 😊 There is no future without AI
- Easier data collection.
- NMCAs can play a key role in providing high-quality, reliable reference data to support AI/ML training and validation of results.

- AI is a tool that need to be used intelligently 😊

- Automatic process of creating printable pdf/paper maps in different scales.
- to be a better service deliverer
- Different staff skill set and new data being collected from different sources

- hopefully it will be able to manage many of the 'low hanging fruit' jobs in object detection, almost autonomously.
- Less manual work, just checking

- NMCAs already apply AI/ML, but are still before the tipping point. Some already have excellent results and expertise - but overall, we will have to put more resources to catch up with this field.

- NMAs - pursue it!
- AI Can be a very useful tool in our production processes !
- AI is a tool

Thank you!
