21-22 October 2024, Geneva

A reference framework for structural metadata governance

Speaker: David Barraclough, OECD

Author(s):

Abstract

Effective use of structural metadata relies on knowing the different roles and responsibilities for who will design, approve and maintain the artefacts. What are the quality best practices and how is responsible for those? And who is responsible for communicating changes and training?

All of these decisions depend on well-defined processes and a clear governance policy.

This presentation will describe a reference framework that can help you base structural metadata governance and workflows on tried-and-tested methodology and explain common ways that the framework can be customised.
