Tau-Argus: Lessons learned of sharing an IT-tool in Official Statistics

Speaker: Lucas Quensel-Von Kalben, Statistisches Bundesamt (Destatis)

Author(s): Lucas Quensel-von Kalben, Statistisches Bundesamt

Abstract

Tau-Argus is a tool for statistical disclosure control used by many statistical offices in Europe and beyond. It has a history leading back to the 1990-ies and become open-source in 2014. Because of its widespread of use and its long history it is a prominent example for sharing a tool in the statistical community. The presentation aims to share some of the experiences made in the past and develop some practical guidance for CSPA and its European equivalent of shared services.
