

Belgrade, Republic of Serbia  
4 – 5 July 2024

Workshop on  
Implementing the United Nations Framework  
Classification for Resources (UNFC) in Southeast  
Europe

**UNFC National Inventories  
from mining wastes and EOL**

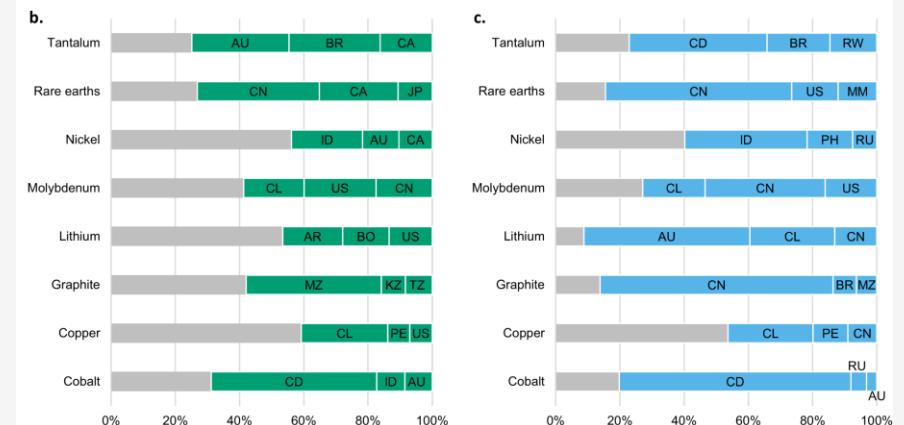

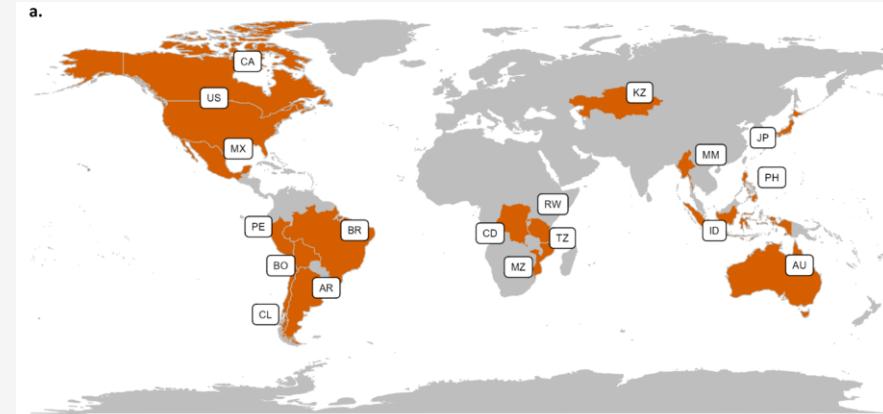

Ulrich Kral  
EU4Green Circular Economy Coordinator,  
Chair of UNECE EGRM Anthropogenic Resource WG  
Environment Agency Austria

# Relevance of the topic

2

## Estimates on the future supply of raw materials require

- (national) resource inventories,
- extraction policies, industrial capability, investments and social acceptance.

Owen, J.R., Kemp, D., Schuele, W. et al. Misalignment between national resource inventories and policy actions drives unevenness in the energy transition. Commun Earth Environ 4, 454 (2023). <https://doi.org/10.1038/s43247-023-01134-4>

# EU Critical Raw Materials Act

- **Article 2: Definitions**

‘critical raw material project’ means any planned facility or planned significant extension or repurposing of an existing facility that is active in the **extraction, processing or recycling** of critical raw materials

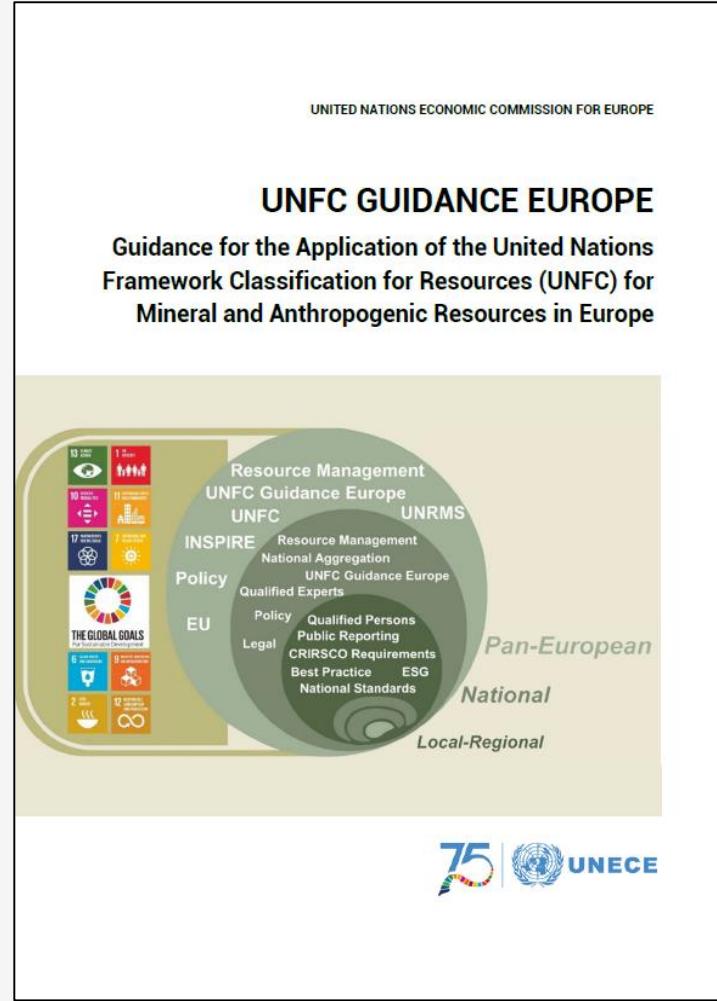

- **Article 21: Information obligations for monitoring**

Member States shall [...] provide information to the Commission on **new or existing critical raw material projects** on their territory [...] **including a classification of new projects according to the UNFC**.

- **Article 27: Recovery of critical raw materials from extractive waste**

8. [...] Where possible, the Member States shall include in the database a classification of the **closed extractive waste facilities according to the UNFC**.

# UNFC Guidance Europe

- This document facilitates the development of **UNFC-based inventories** across Europe.
- It provides alignment with Infrastructure for Spatial Information in Europe (**INSPIRE**) for mineral resources.
- The purpose is to provide a **uniform raw materials dataset** that would be suitable for **aggregated data across Europe** for both **primary and secondary raw materials**.

# Case 1: EGDI UNFC layer

**EGDI**

**Finland, 2019, Potentially viable projects**

Commodity group	Commodity	Amount	UNFC Code
Magnesite	Magnesite	.00 t(mc)	E2 F2 G3
Magnesite	Magnesite	.00 t(mc)	E2 F2 G2
Magnesite	Magnesite	.00 t(mc)	E2 F2 G1
Magnesite	Magnesite	.00 t(mc)	E2 F2 G2+G3
Gold	Gold (mine production, metal content)	105,900.00 kg(Au)	E2 F2 G2
Phosphate	Phosphorous pentoxide (P <sub>2</sub> O <sub>5</sub> )	10.94 Mt	E2 F2 G1
Nickel	Nickel (mine production, metal content)	110,724.00 t(mc)	E2 F2 G1
Lead	Lead (mine production, metal content)	11,880.00 t(mc)	E2 F2 G2
Vanadium	Vanadium (mine production, metal content)	131,948.00 t(mc)	E2 F2 G3
Copper	Copper (mine production, metal content)	1.31 Mt	E2 F2 G1+G2+G3
Chromium	Chrome (metal)	13.48 Mt	E2 F2 G1
Zinc	Zinc (mine production metal content)	141.87 kt	E2 F2 G2
Zinc	Zinc (mine production metal content)	157.60 kt	E2 F2 G1
Iron	Iron oxide	16.25 Mt	E2 F2 G2+G3
Chromium	Chrome (metal)	16.28 Mt	E2 F2 G2
Palladium	Palladium (metal)	171.00 t(mc)	E2 F2 G3
Cobalt	Cobalt (mine production, metal content)	177.23 kt	E2 F2 G1+G2+G3
Palladium	Palladium (metal)	178.00 t(mc)	E2 F2 G2
Platinum	Platinum (metal)	18.00 t(mc)	E2 F2 G1
Gold	Gold (mine production, metal content)	204,300.00 kg(Au)	E2 F2 G3
Titanium	Titanium metal	213,983.00 t(mc)	E2 F2 G2
Palladium	Palladium (metal)	22.00 t(mc)	E2 F2 G2+G3
Gold	Gold (mine production, metal content)	2,240.00 kg(Au)	E2 F2 G2+G3
Nickel	Nickel (mine production, metal content)	2,332,000.00 t(mc)	E2 F2 G1+G2+G3
Lithium	Lithium oxide (Li <sub>2</sub> O)	23.74 kt	E2 F2 G3
Titanium	Titanium metal	281,745.00 t(mc)	E2 F2 G3
Titanium	Titanium metal	3,064,795.00 t(mc)	E2 F2 G2+G3
Silver	Silver (mine production, metal content)	310.00 t(mc)	E2 F2 G3
Cobalt	Cobalt (mine production, metal content)	31.05 kt	E2 F2 G2
Copper	Copper (mine production, metal content)	311.20 kt	E2 F2 G1
Cobalt	Cobalt (mine production, metal content)	31.32 kt	E2 F2 G3
Silver	Silver (mine production, metal content)	348.00 t(mc)	E2 F2 G2

# Case 1: Mineral potential of the Eastern and South-Eastern region

Mineral potential of the  
Eastern and South-Eastern  
Europe region

Funded by  
the  
European Union

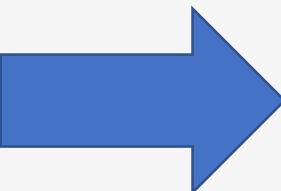

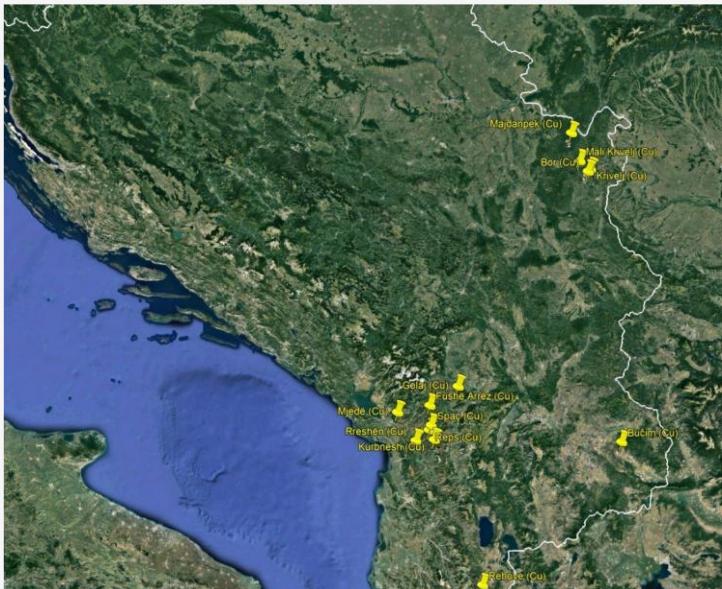

6

## Storage site for mining and metallurgical residues

1'461

Sites in total

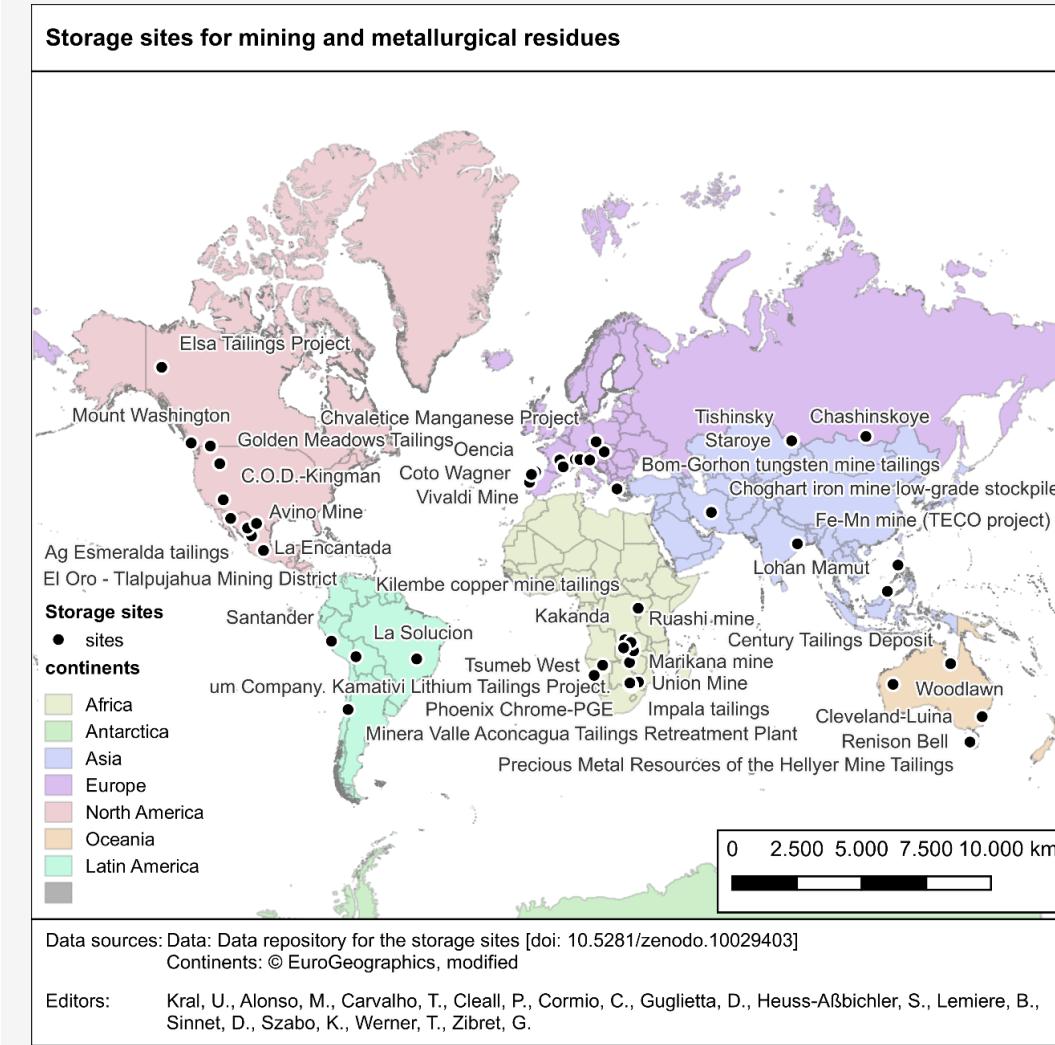

36

Sites with potential secondary  
sources of raw materials with  
economic value

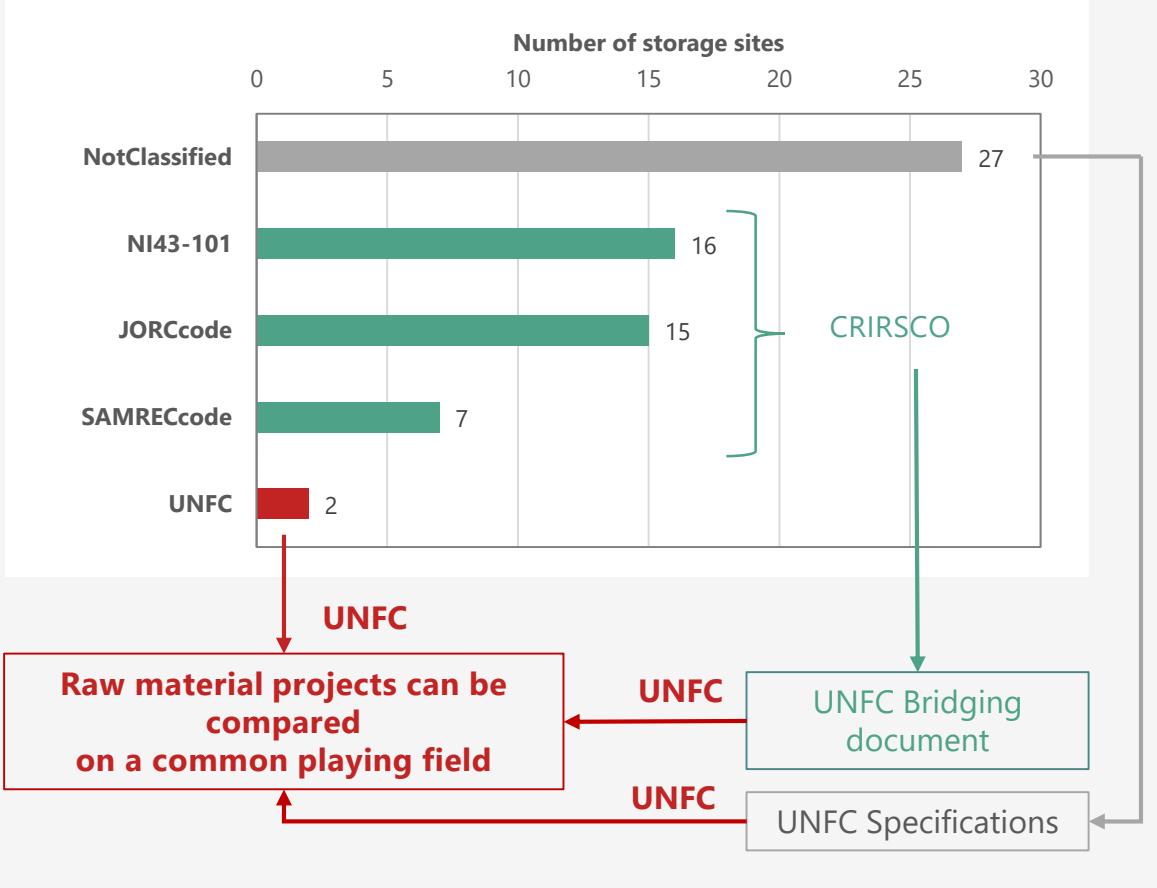

Country	Counts
Albania	7
Bosnia & Herzegovina (FBiH)	2
Bosnia & Herzegovina (RS)	3
Montenegro	2
North Macedonia	9
Serbia	13

Processing Waste Landfills-Cu flotation tailings

# Case 2: Mining and metallurgical residues

> 60 storage sites

# Case 3: France

- National UNFC inventory for CRM recovery from post-consumer residues is under development at BGRM
- Focus on batteries, magnets and WEEE recycling projects
- Inventory based on public available data
- Without estimates on recoverable quantities (just announced capacities)

# Some final, personal thoughts

---

- Inventories with recoverable quantities exist for
  - in-ground resources (very often),
  - mining residues (sometimes),
  - end-of-life flows (rarely to never)
- Significant progress in developing and publishing harmonized inventories.
- UNFC-based raw material inventories are not the norm.
- Future efforts for data integration across different sources of supply needed.
- Inventories are snapshots.
- Inventories are on top of the information pyramid.
- Background data and knowledge on enabling conditions (e.g. extraction policies) are needed to make projections on future raw material supply.
