Proposal for a new entry of UN No. 1300 Turpentine Substitute in Table C

Transmitted by European Chemical Industry Council (Cefic)

Annex to document ECE/TRANS/WP.15/AC.2/2024/10

Introduction

1. A safe gap of Turpentine is not listed in the official database of PTB and BAM (Chemsafe). Therefore, it has been requested to PTB the determination of the Maximum Experimental Safe Gap (MESG) of our Turpentine.

Proposal

2. Based on the test results (as shown in the Annex of ECE/TRANS/WP.15/AC.2/2024/10), the MESG = 0.91 mm, we recommend the addition of a new entry for UN No. 1300 TURPENTINE SUBSTITUTE in Table C of Chapter 3.2 of 2025 version of ADN, with explosion group IIB⁴ (IIB3) in column 16 and remark 44 in column 20 as represented below:

<table>
<thead>
<tr>
<th>300</th>
<th>TURPENTINE SUBSTITUTE</th>
<th>3</th>
<th>F1</th>
<th>II</th>
<th>3+N2+F</th>
<th>N</th>
<th>3</th>
<th>3</th>
<th>97</th>
<th>0.78</th>
<th>3</th>
<th>yes</th>
<th>T3</th>
<th>IIB⁴ (IIB3)</th>
<th>Yes</th>
<th>PP,EX,A</th>
<th>0</th>
<th>44</th>
</tr>
</thead>
</table>

3. Due to an oversight during the January meeting, information was not included in column 17. Therefore, as previously indicated, we propose adding "Yes" to column 17 of the adopted proposal.
