

# Utilizing administrative data for the census: Promising, but are we ready?

**Workshop on Population and Housing Censuses**  
30 September – 1 October 2024

Afsaneh Yazdani  
Statistician, ESCAP Statistics Division

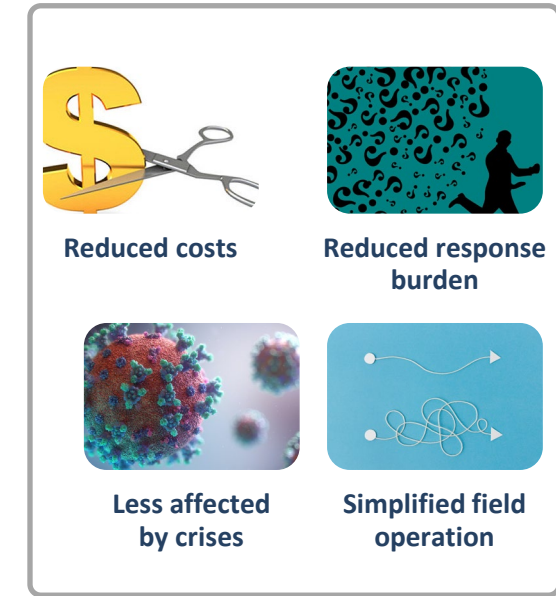

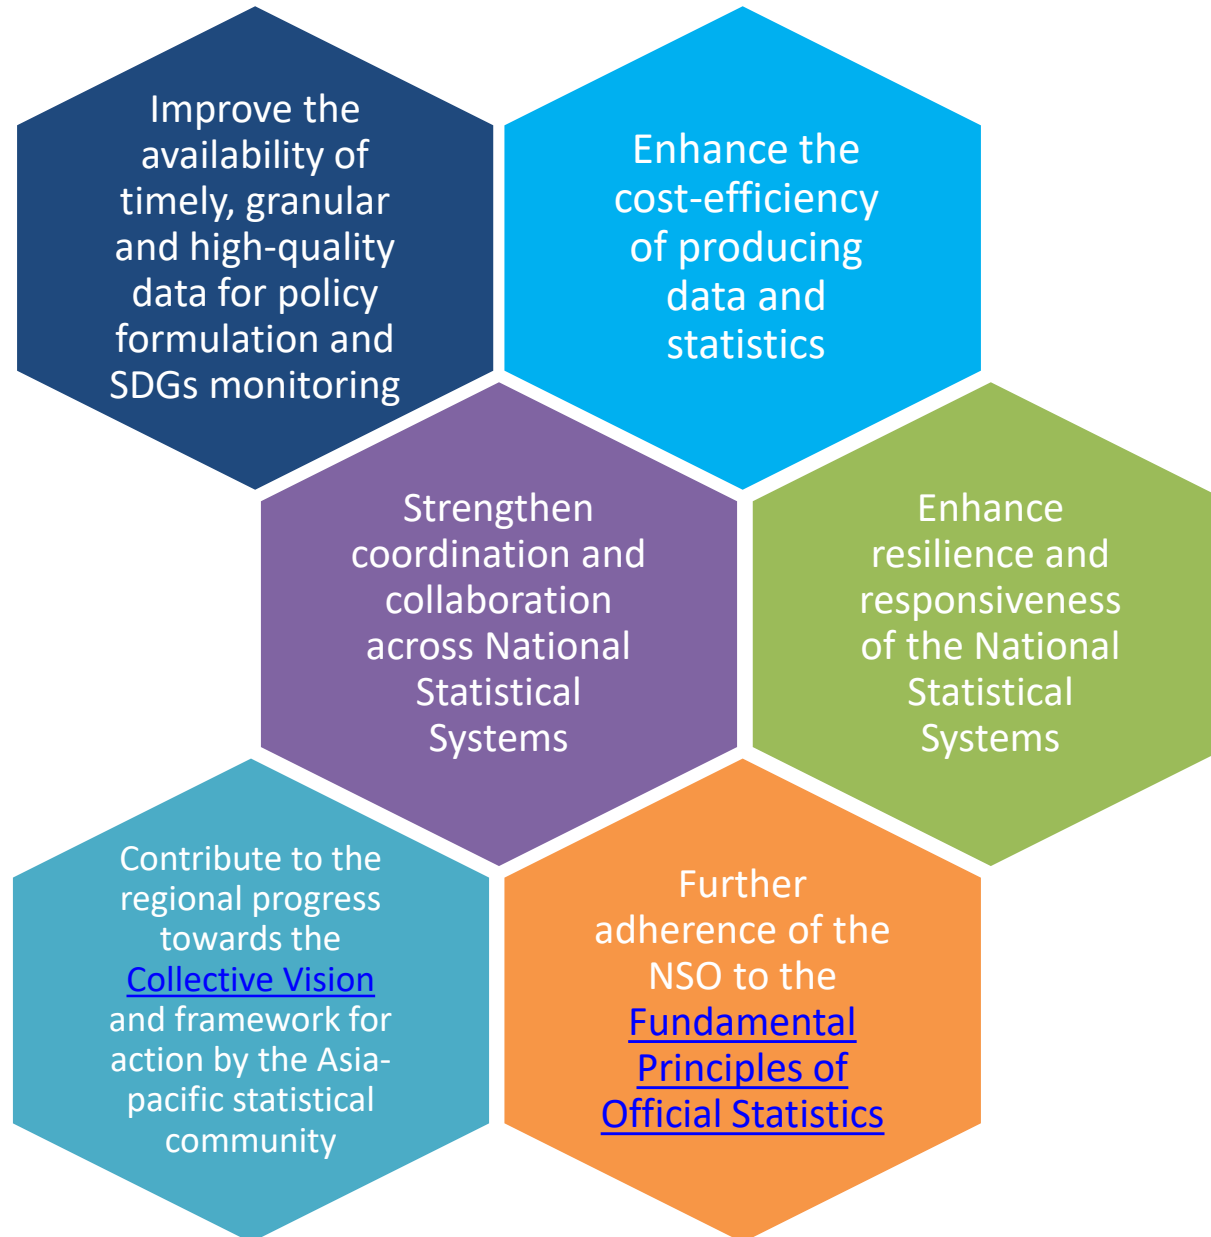

# Context

- Increasing and evolving **demands** for quality, timely, and granular data and statistics
- **Challenges** of traditional Population and Housing Censuses:
  - Significant time and resource commitments
  - Prolonged data collection intervals (every 5/10 yrs.)
  - Declining response rates
  - Vulnerability to crisis-related disruptions (e.g. Covid19)
- Technological **advancements**, the availability of new data sources and the feasibility of applying more complex approaches.

A widely acknowledged approach is the use of administrative data for census purposes, which in its most advanced form is the fully register-based census.

# Utilizing administrative data for census: Potential benefits

# Utilizing administrative data for census: Potential challenges

**Availability of relevant data sources**

**Access to data sources and data protection**

**Sustainable collaboration with data holders (public/private)**

**Public approval**

**ICT infrastructure**

**Human resources and technical capacity**

**Interoperability**

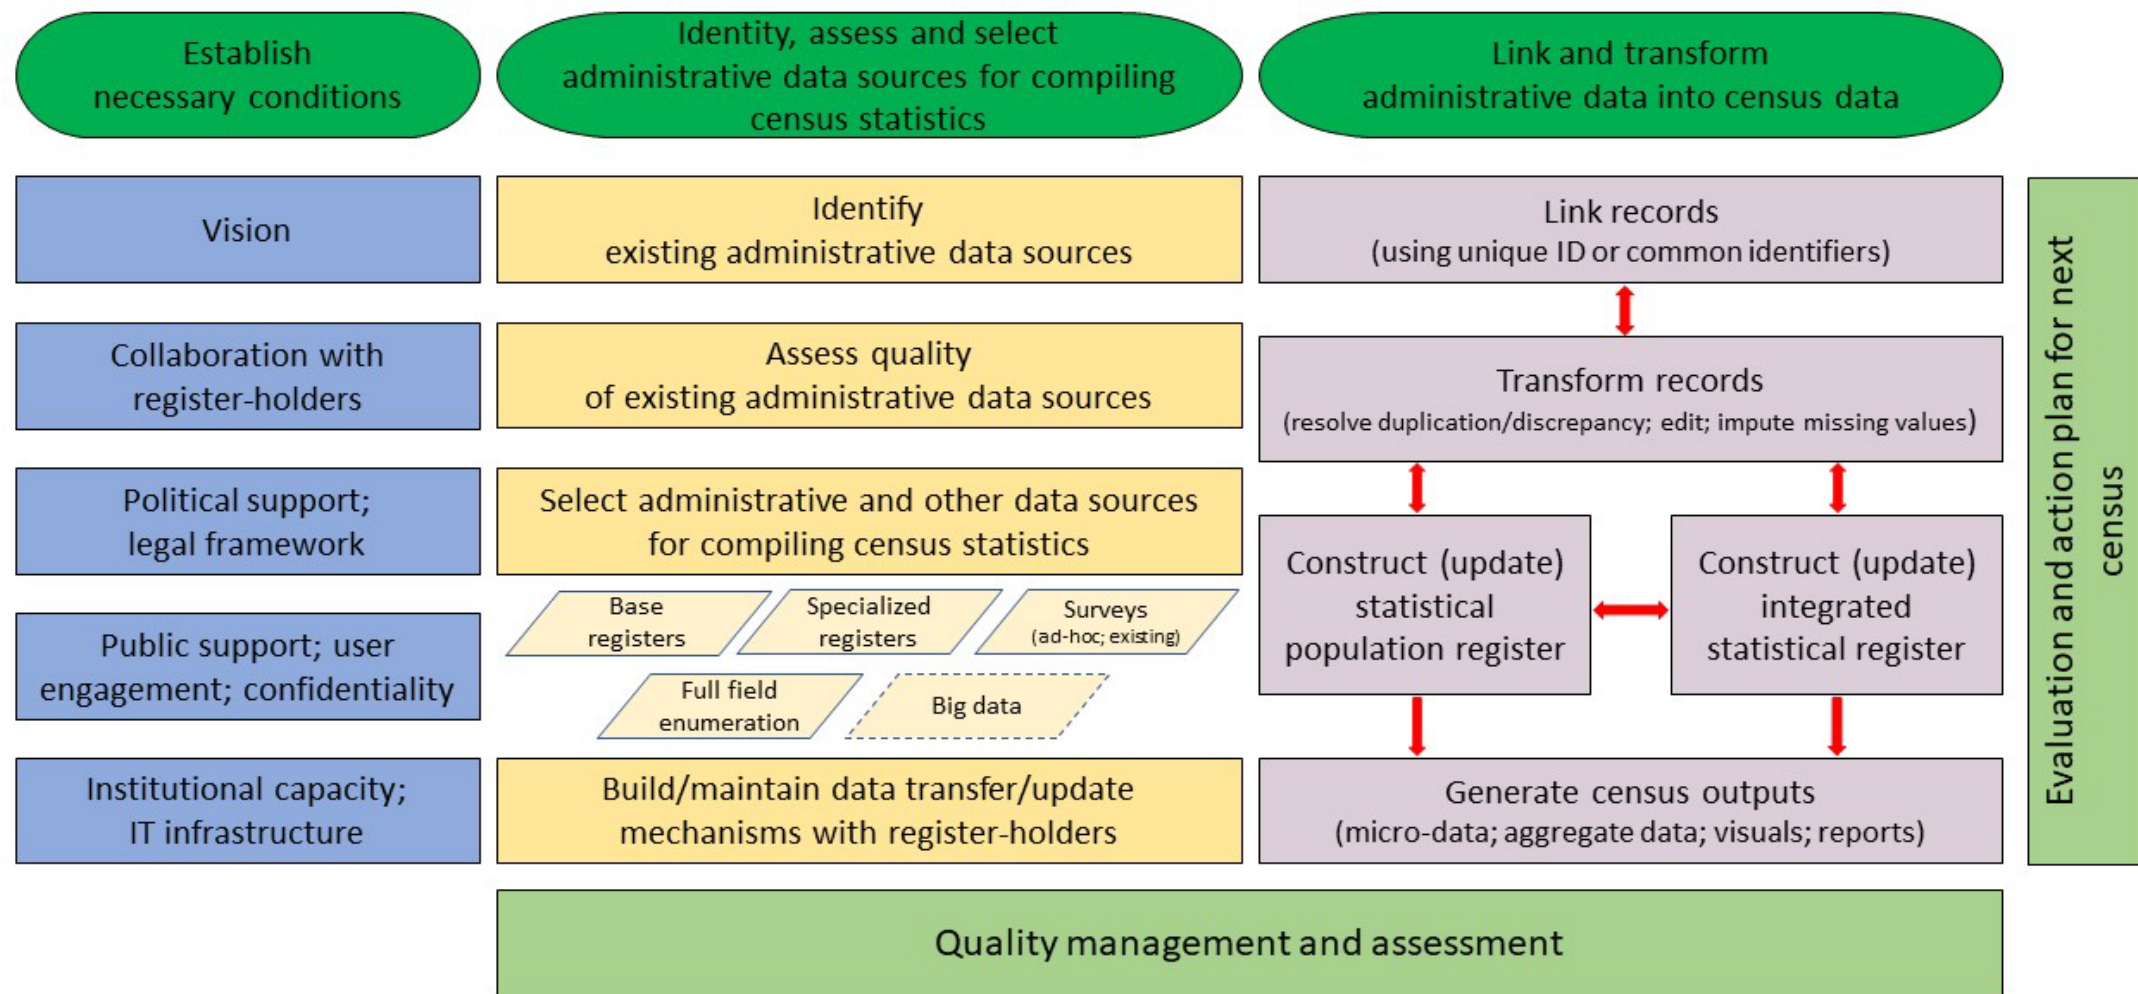

**Quality assurance**

**Communicating and dissemination**

# Self-Assessment Tool on the Readiness to Use Administrative Data for Census (SATRAC)

## Development steps:

- **2023:** initial draft, pilot with countries participating in [Regional Training Workshop on Transition to Register-based Approaches for Population and Housing Censuses](#), Ankara, 12-15 June 2023
- **2024:**
  - revise based on the feedback received from the above-mentioned workshop
  - pilot with participating countries in two Regional Workshops (ESCAP and ECE region) in late September and early October
  - revise and conduct a global consultation
- **Early 2025:** Launch of the tool

# Self-Assessment Tool on the Readiness to Use Administrative Data for Census ([SATRAC](#))

- **Objective:** to assist countries in self-assessment of their current institutional and technical capacity for utilizing administrative data sources in their censuses.
  
- **The tool:**
  - highlights different institutional and technical aspects that should be considered before/while using administrative data for the census
  
  - assists countries in:
    - identifying their areas of strength, weakness and shortcomings,
    - evaluating their progress made over time
    - improve communication between the NSO and relevant administrative data holders
  
  - Provides valuable information for developing/updating the roadmap

# Self-Assessment Tool on the Readiness to Use Administrative Data for Census ([SATRAC](#))

## Content of the SATRAC

- Targeting both NSOs and Admin data-holders
  - NSO module contains seven sections, with a total of 52 questions
  - Admin data-holder module contains six sections, with a total of 28 questions
- Multiple response categories with the option to provide explanations and any details as relevant
  - **“yes”, “no”, “partially”, “don't know”**

# Self-Assessment Tool on the Readiness to Use Administrative Data for Census ([SATRAC](#))

## ➤ **NSO module:**

- Political support and legal framework
- Collaboration with administrative data holders
- Availability of administrative data sources
- Unified identification system
- Human and IT Resources
- Methodological matters and quality assessment
- Data confidentiality

To be completed by a cross-functional team  
comprised of different relevant units of NSOs

# Self-Assessment Tool on the Readiness to Use Administrative Data for Census ([SATRAC](#))

## ➤ **Administrative data holders' module:**

- Institutional arrangements
- Data sharing
- Database and availability of unique identifier
- Data quality
- Coverage
- Consistency and comparability

NSO to coordinate with key administrative data holders to complete

# Score of the readiness -- based on the “YES” responses to the questions (%)

**NSO**

**Admin data holder**

# Your feedback?

- How was your experience with completing the questionnaire?
  - What modules/sections were easy to answer?
  - What modules/sections were difficult to answer, please explain why?
  - What sections should be added (if any)? Please suggest questions/sections?
  - Which questions or sections can be removed (if any)- please explain reasons
  - Which questions were not clear and require clarification?
  - Any other proposed changes?
  
- Did the questionnaire help you to assess your country's readiness to use administrative data for census purposes?
