Group of Experts on Measuring Poverty and Inequality
28-29 November 2024
Workshop on Harmonization of Poverty Statistics
27 November 2024

Title of contribution	<i>EU- SILC data for monitoring of the energy poverty in the EU</i>
Author Name(s)	<i>Emilio DI MEGLIO</i>
Presenter Name	<i>Emilio DI MEGLIO</i>
Presenter Organization	<i>EUROSTAT</i>
Topic	<i>Energy poverty</i>
Summary: <i>Energy poverty refers to the inability of households to access affordable energy services, such as heating, cooling, lighting, and appliances, due to low income or high energy costs. The Statistics on Income and Living Conditions (EU-SILC) can be used to assess energy poverty levels. In particular the yearly question on ability to keep house adequately warm. In 2023, 10.6% of the EU population declared that they were not able to keep their home adequately warm. Compared with 2022, this share increased by 1.3 percentage points (pp) and by 3.7 pp compared with 2023.</i> <i>The module 2023 on energy efficiency allows to understand the phenomenon even better. Data are now available by type of heating, energy efficiency measures and thermal comfort of the dwelling. Some results of this module will also be presented.</i>
