

# Alternative Data Sources Used in Türkiye's CPI

Utilization and Integration of New  
Data Sources  
for the Consumer Price Index

29-31 October 2024  
Brussel

Turkish Statistical Institute  
Department of Price Statistics

Hasan ÇİĞ

# Presentation Structure

**A**

**Introduction to  
Data Sources**

**B**

**Scanner Data  
Overview and  
Methods**

**C**

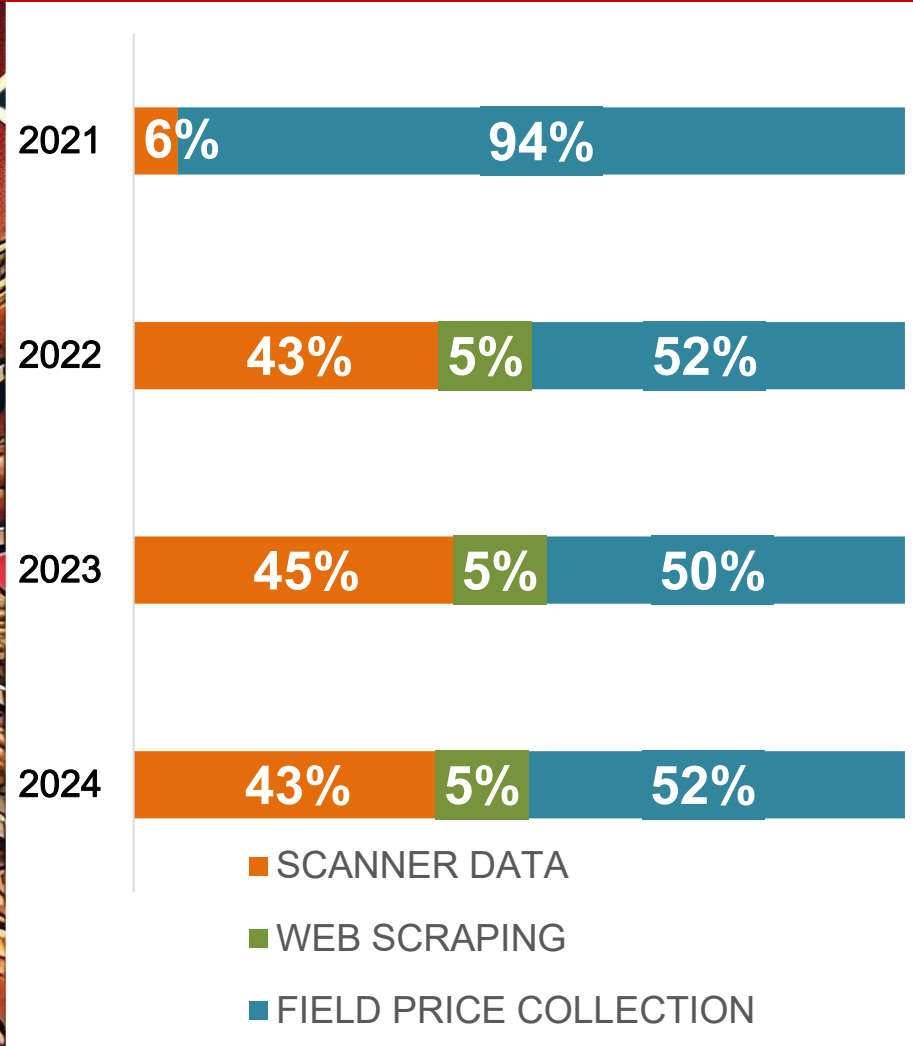

**Web Scraping  
Overview and  
Workflows**

**D**

**Future Plans  
and Research**

# Historical Change in Data Source Distribution

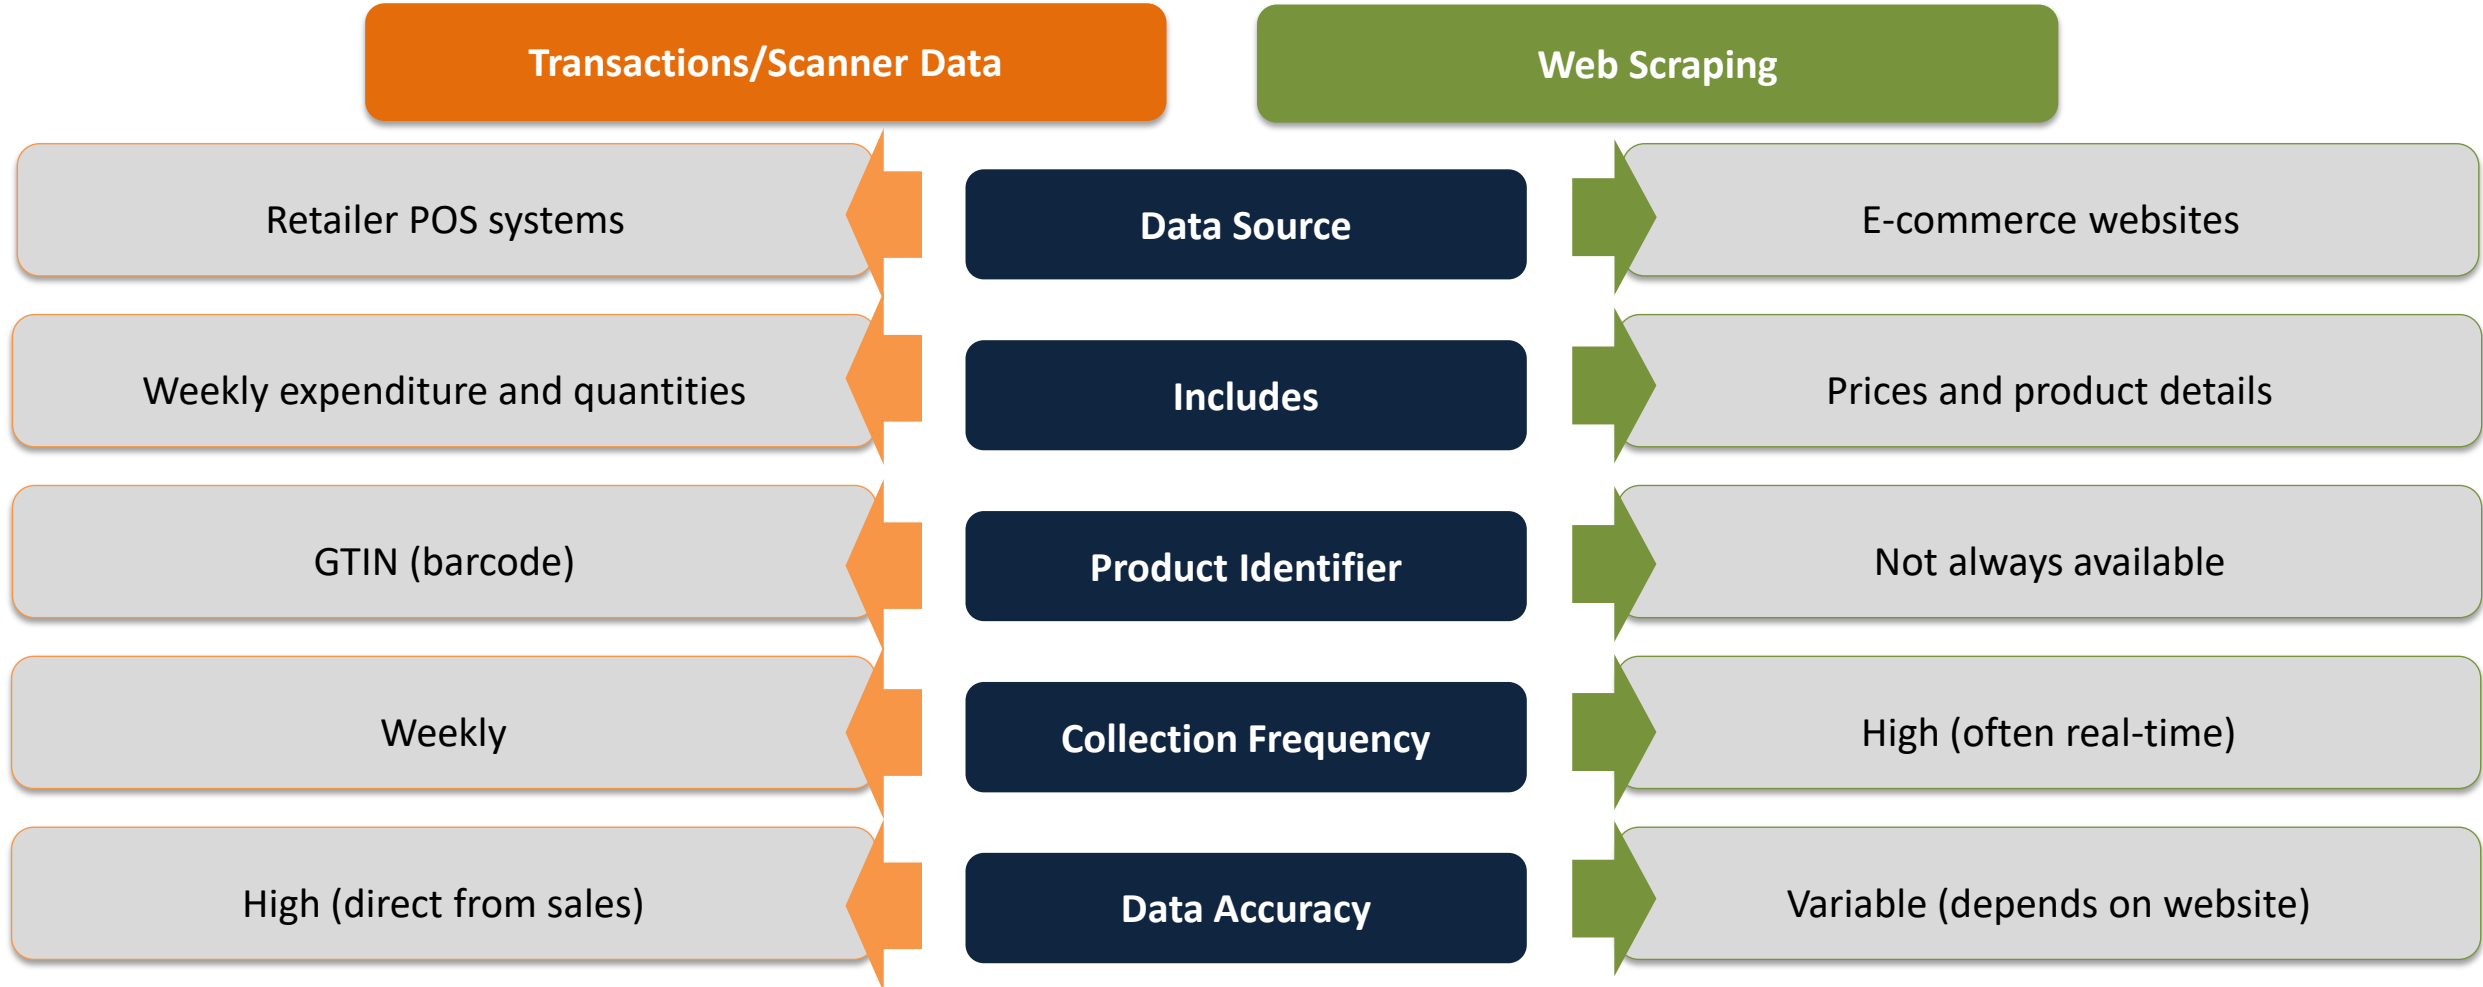

# Data Sources used in Turkish CPI (2024)

Year	Scanner Data	Web Scraping	Field Price Collection	Total Number of Prices Collected
2021	14.041	-	231.972	246.013
2022	104.968	12.472	126.649	244.089
2023	107.562	12.784	119.866	240.212
2024	109.165	13.017	134.166	256.348

# Scanner Data vs Web-Scraped Data

## Scanner Data Overview

- TurkStat started incorporating scanner data into its data collection methods in 2018.
- TurkStat has been using scanner data to compile CPI since 2021.
- Scanner data is collected from both national and local retail chains.
- Currently, scanner data contribute to the calculation of **322 sub-indices** (“**aggregate of products**”) belonging to eight COICOP Divisions (01, 02, 03, 05, 06, 08, 09, 12).
- Scanner data covers 1759 outlets from 33 retails chains.
- For sample selection, TurkStat uses a static approach, where the basket of items is updated each December and monitored throughout the following year.

# Scanner Data Overview

- Scanner data is collected weekly using GTINs (barcodes)
- Data is requested cumulatively for weekly periods: (1-7), (1-14) and (1-24)
- Retailers provide the data by t+2 (two days after data collection period)
- For each barcode (GTIN), prices are calculated based on turnover and quantities (weekly price=weekly turnover/weekly quantities).
- Data from the 1-24 period is used for index calculation.

# Data Quality Assurance and Processing Steps

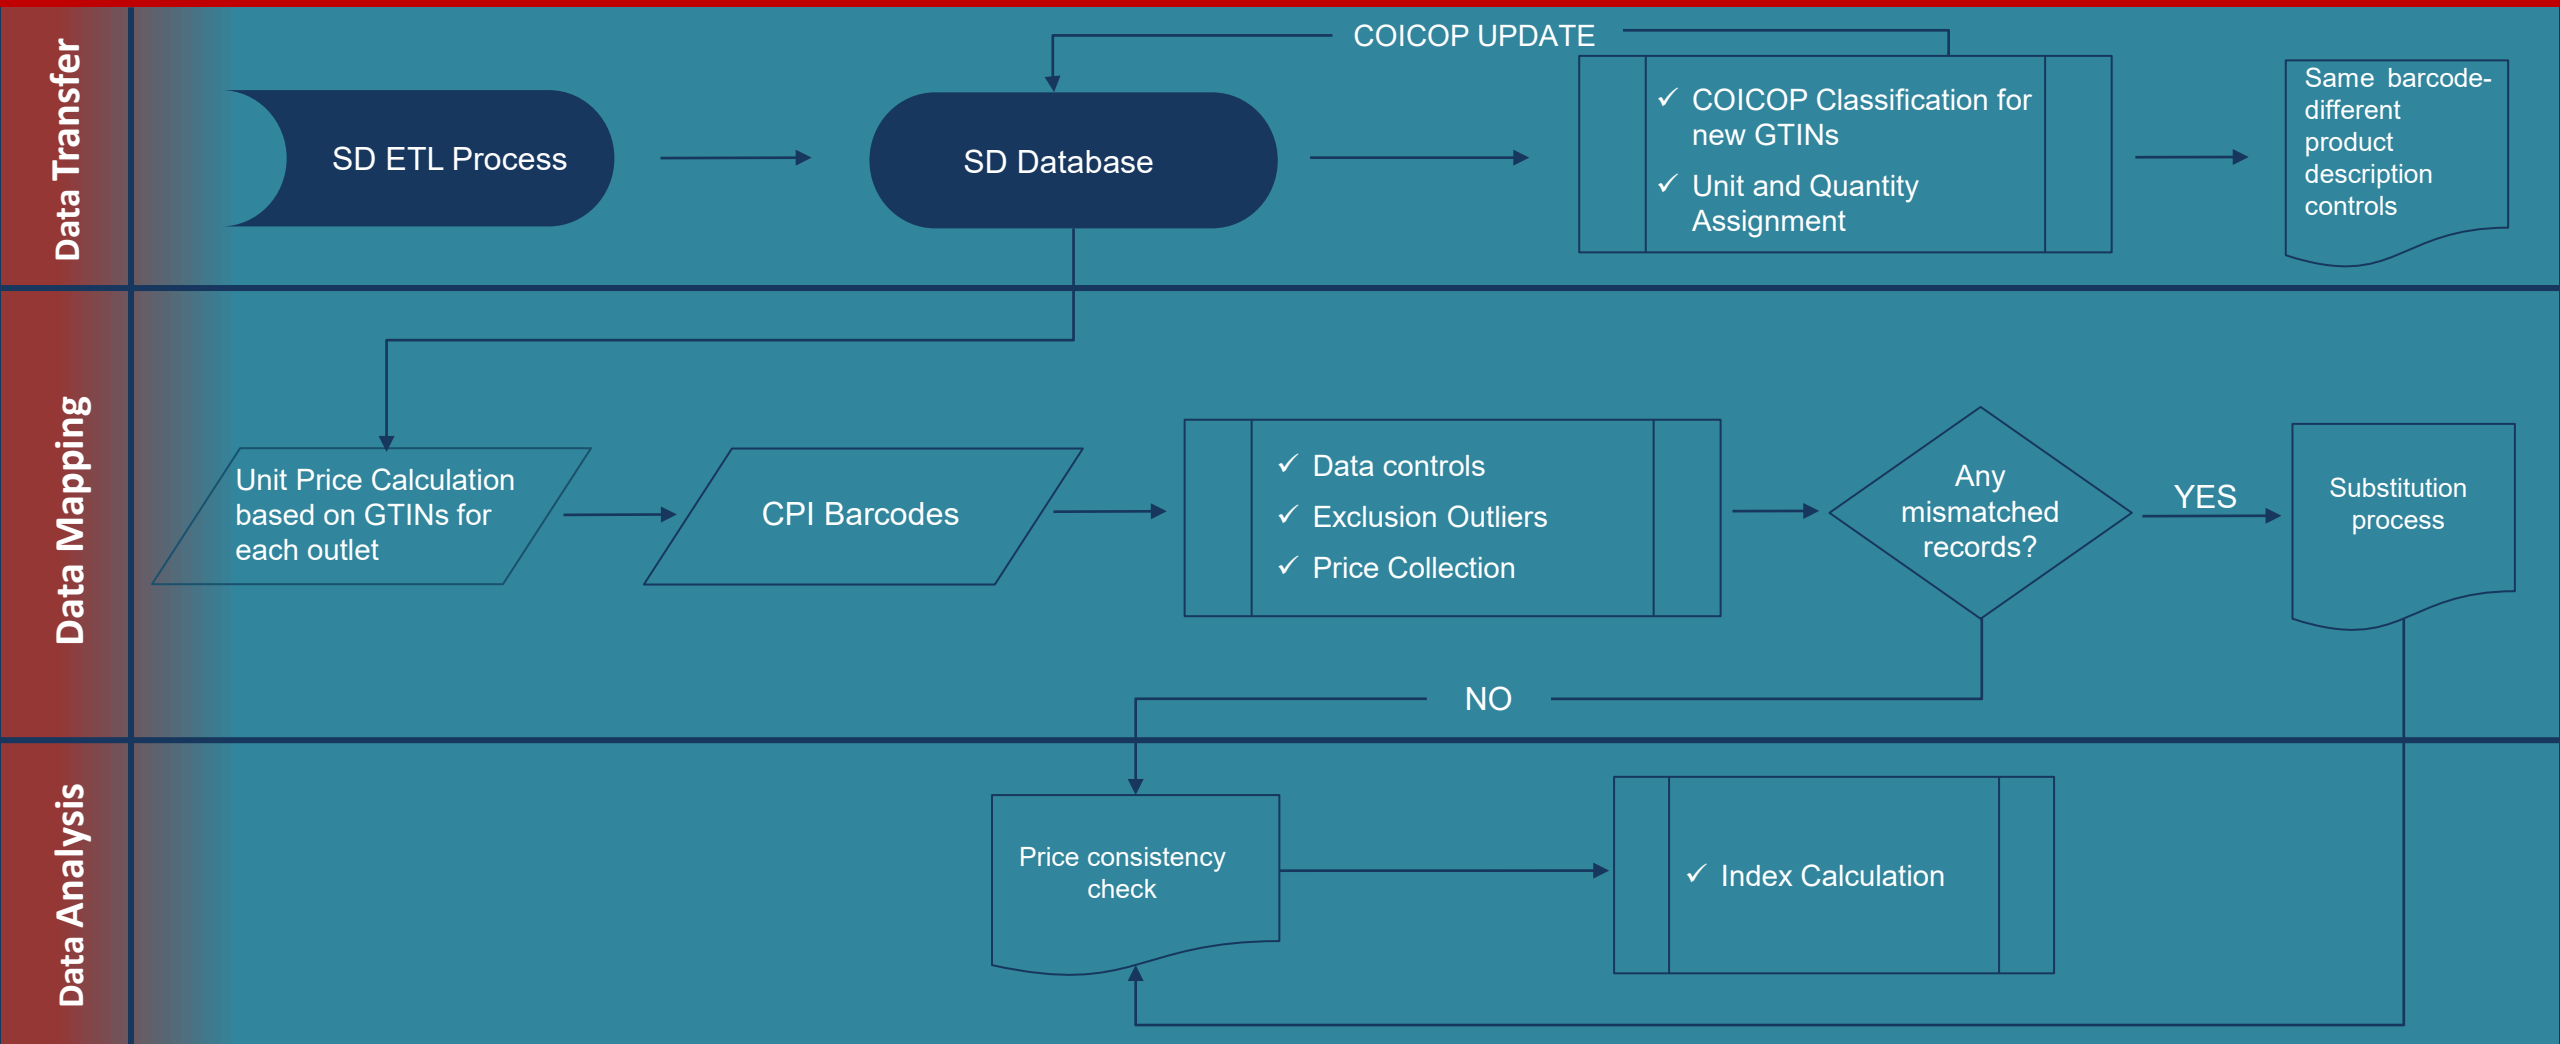

- The quality of the received data is evaluated based on including size, number of outlets, etc.
- The Data Transfer and Processing Group checks consistency across data from previous months.
- Missing and incorrect entries are identified.
- If issues are found, data is re-requested for correction.

# Sample Scanner Data

YEAR	MONTH	PERIOD	RETAIL NO	CITY CODE	OUTLET	ITEM NO	BARCODE	BRAND	COICOP	DEFINITION	QUANTITY	UNIT	SHELF PRICE	UNIT PRICE

# Scanner Data Handling and Processing Pipeline

# COICOP Classification Process

- If a COICOP has previously been assigned to a barcode, unit and quantity codes are directly assigned using a reference table from the database.
- For new products, one of the top 3 most similar previously assigned COICOPs is selected based on description similarity and sent for verification.
- Additionally, machine learning projects using various algorithms are being developed to enhance this process, which is still in progress.

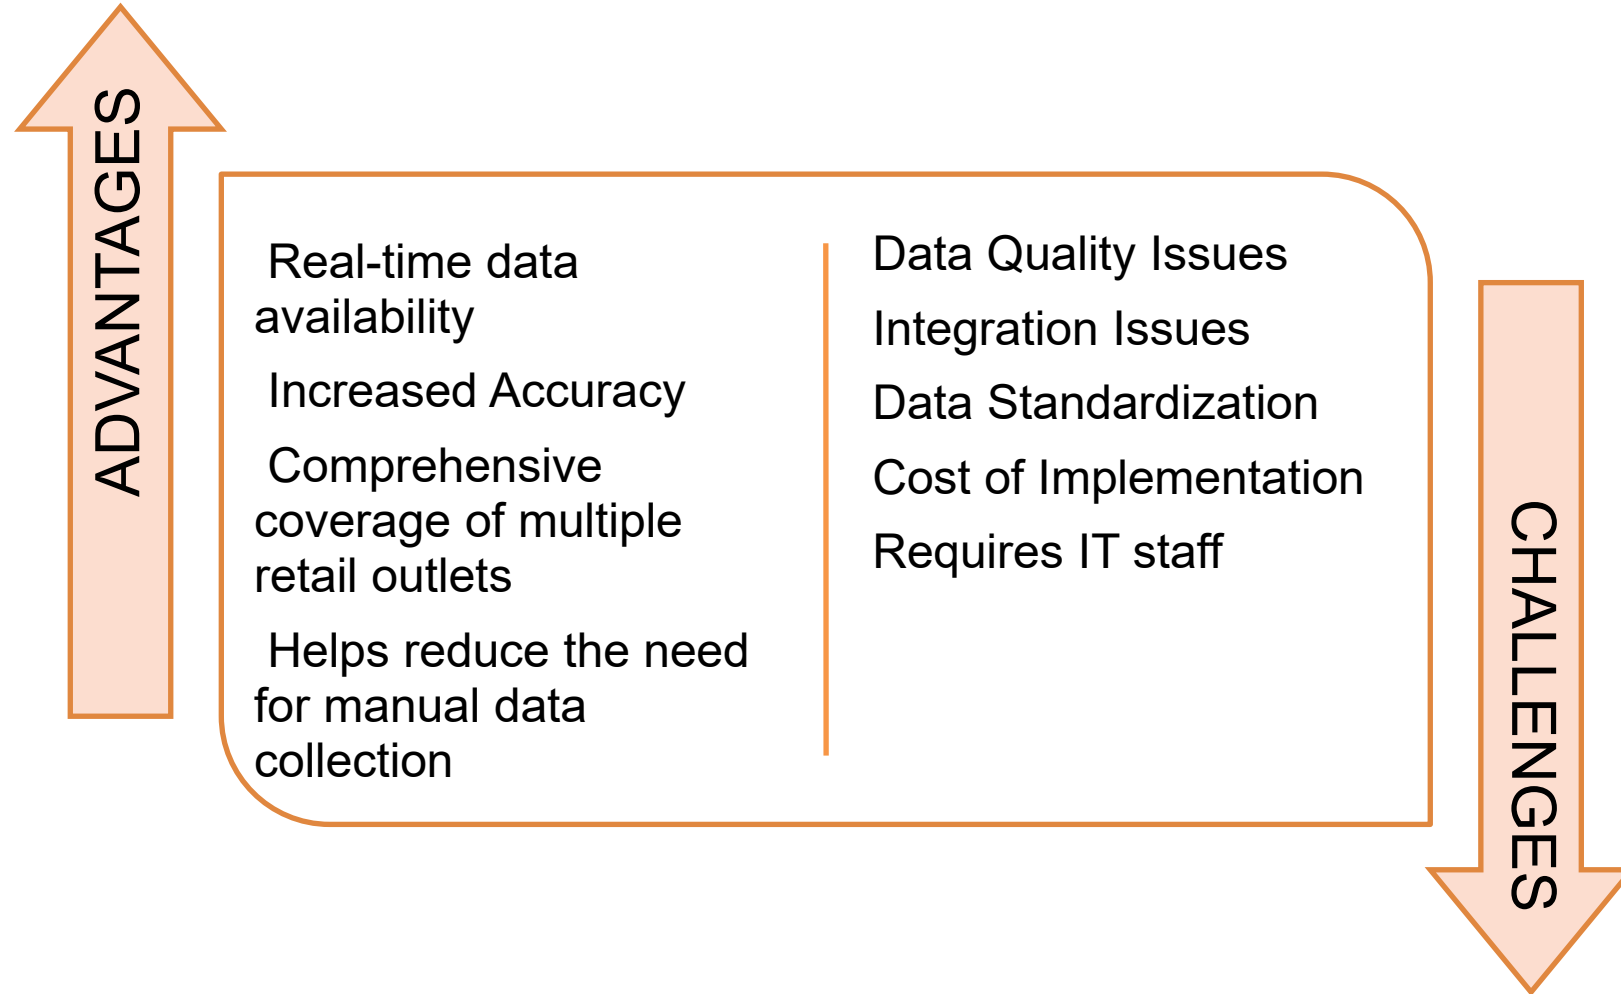

# Integrating Data Sources into Index Calculation

- Currently, TurkStat uses scanner data as a replacement for existing field surveys.
  - The methodology remains unchanged
- Index calculation is conducted by combining data collected from three sources: field data, scanner data, and web scraping data.

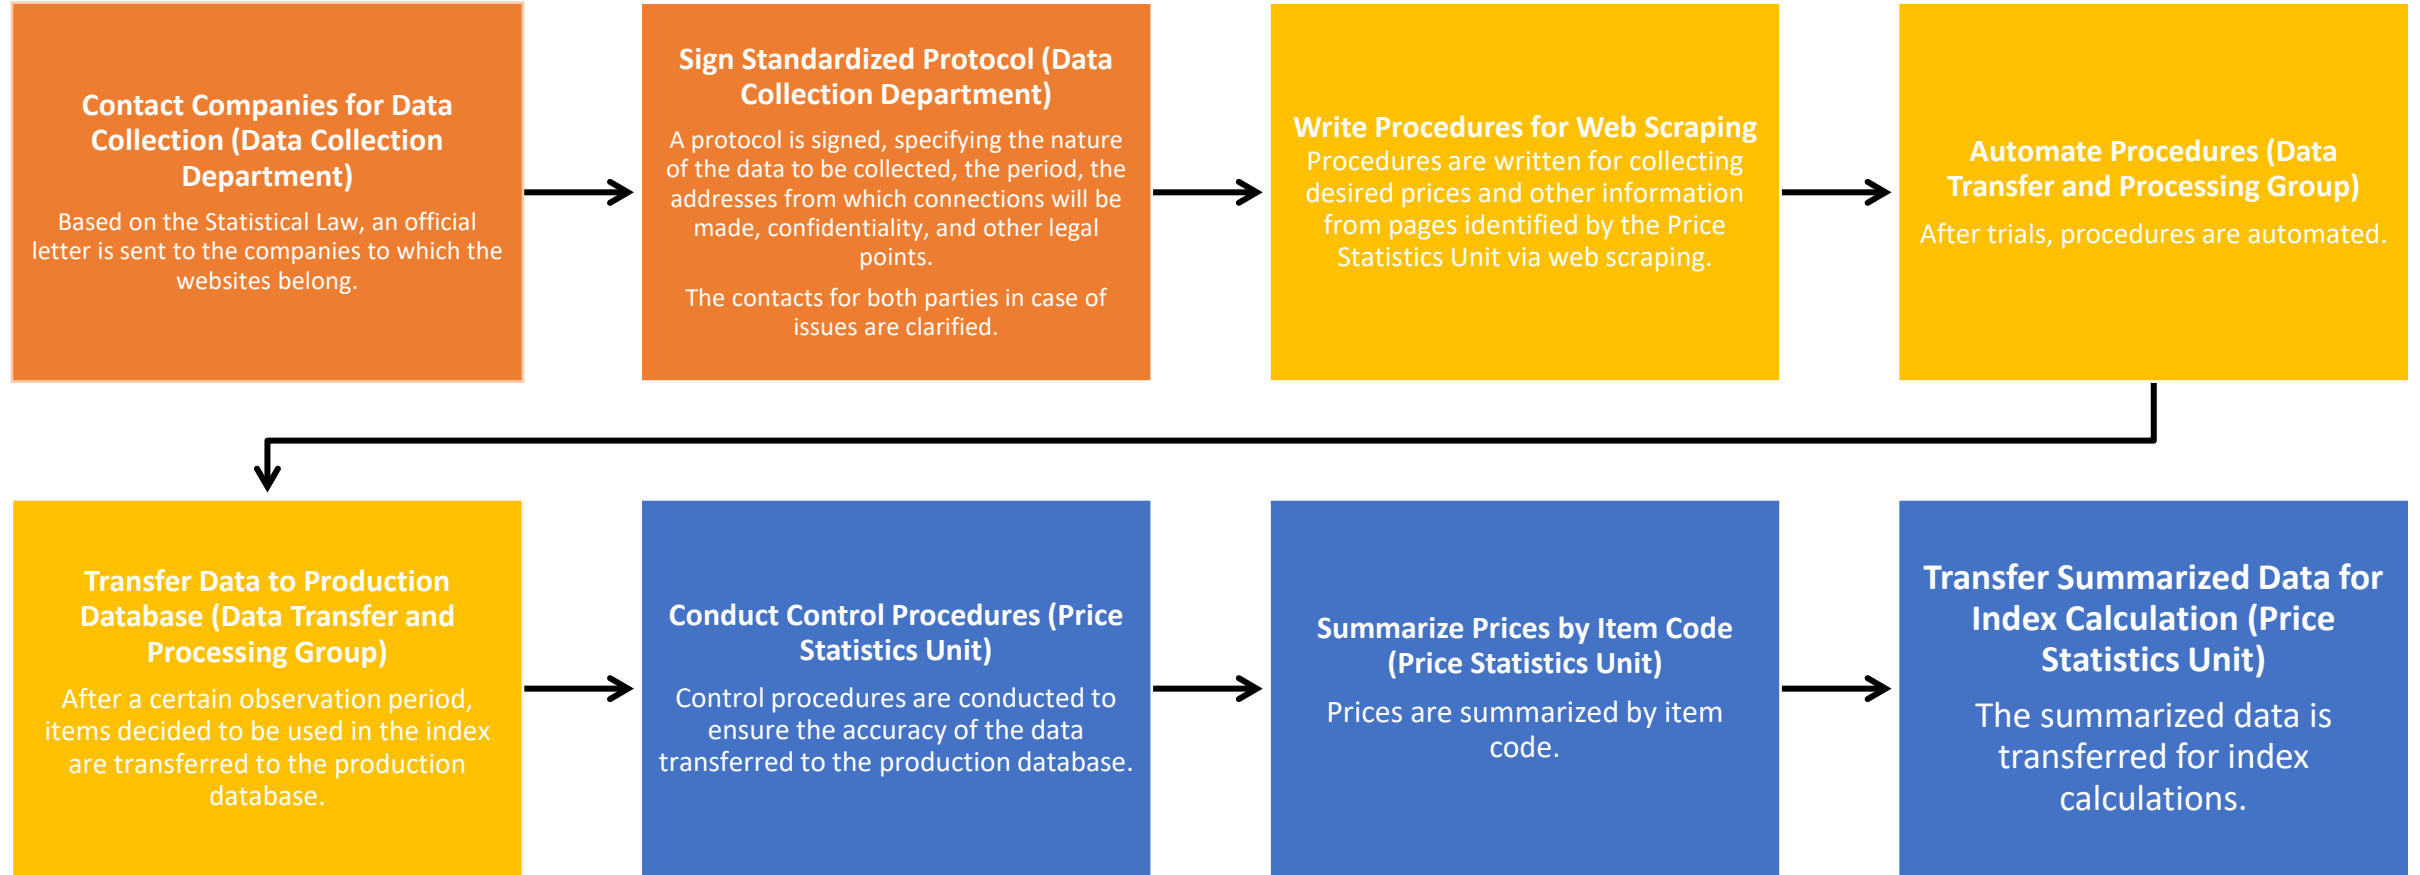

# Scanner Data Advantages and Disadvantages

## Web - Scraping Overview

- Web Scraping has been in use since 2022.
- Web Scraping codes was developed by TurkStat using Python.
- The IT department is responsible for developing and maintaining the scripts, while the Price Department handles the data processing.
- It is applied by monitoring predefined links.

03

## Clothing and footwear

Men's jacket  
 Men's pijamas  
 Men's pullover  
 Men's shirt  
 Men's socks  
 Men's sport shoes  
 Men's suit  
 Men's sweatshirt  
 Men's tracksuit  
 Men's trousers  
 Men's t-shirt  
 Men's underwear  
 Overalls for baby  
 Scarf  
 Skirt  
 Slipper for woman  
 Tie  
 Women's anorak jacket  
 Women's boots  
 Women's cardigan  
 Children's trousers  
 Children's t-shirt  
 Women's coat  
 Women's dress  
 Women's footwear  
 Women's jacket  
 Women's leggings  
 Women's pijamas  
 Women's pullover

05

## Furnishings, Household Equipment and Routine Household Maintenance

Air conditioner  
 Bed clothes  
 Bed cover  
 Bed pique set  
 Blanket  
 Blender  
 Built-in Cooker  
 Built-in Microwave Oven  
 Built-in Oven  
 Carpet  
 Chair  
 Combi boiler  
 Dish washing machine  
 Double bed  
 Freezer  
 Iron  
 Nesting table  
 Pillow  
 Toster  
 Washing machine

07

## Transport

Automobile  
 Bus fare  
 (inter-urban)

08

## Communication

Mobile phone  
 Mobile phone spare parts and accessories

09

## Recreation and Culture

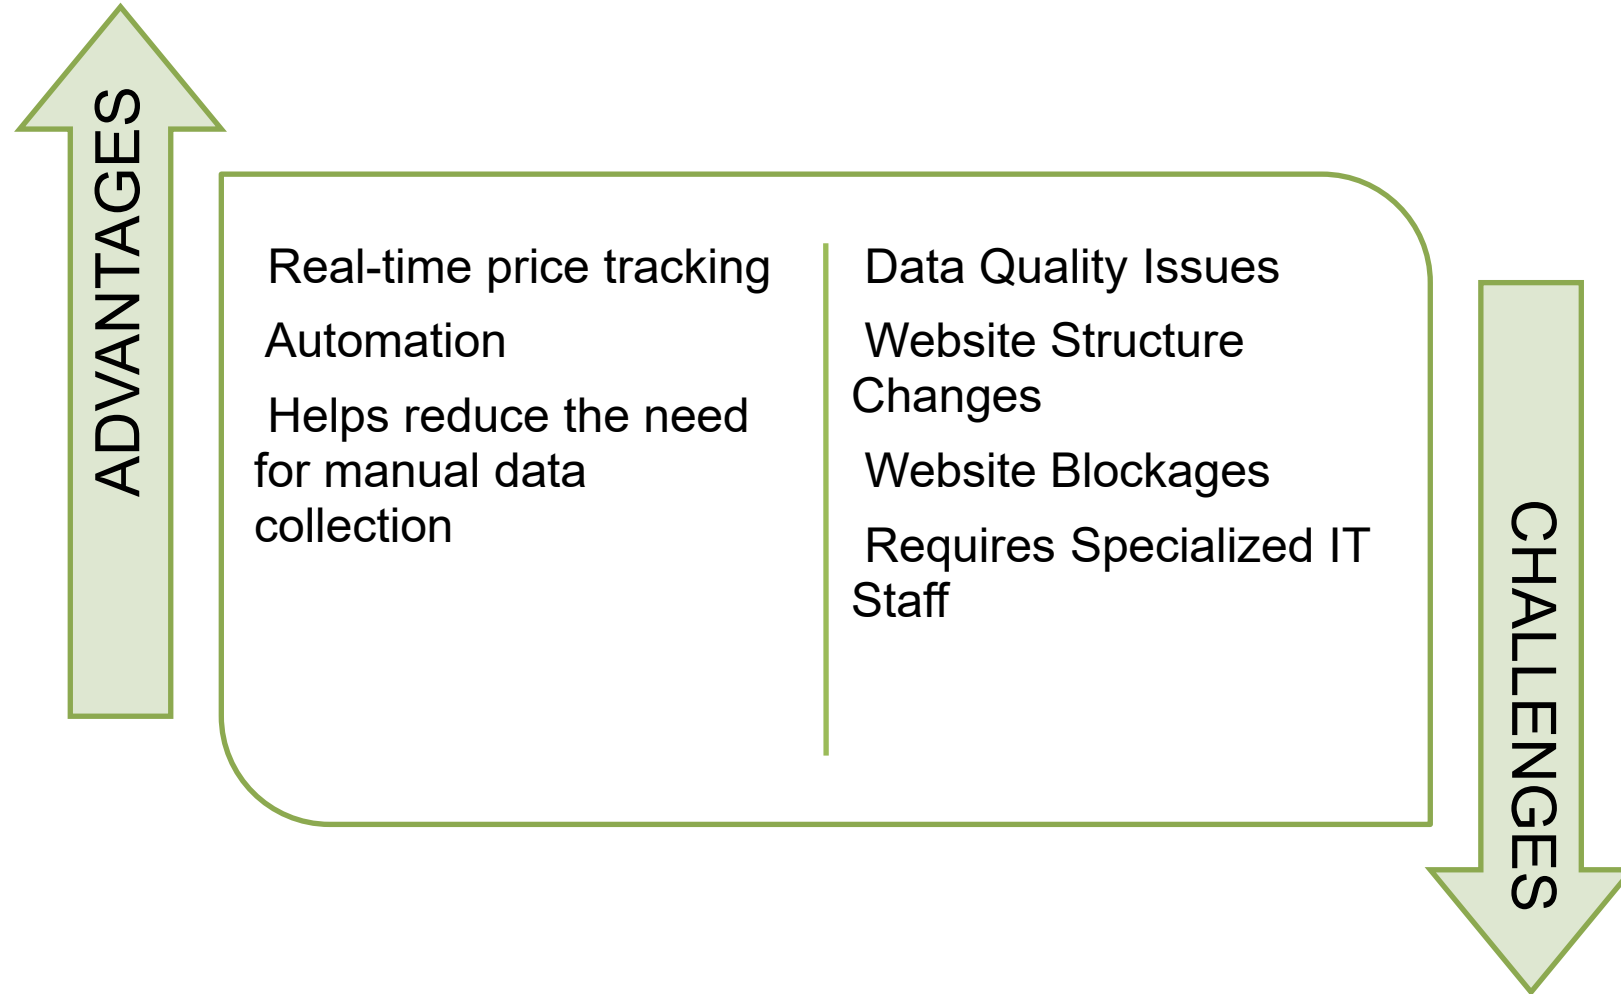

Items for sport and recreation  
 PC and Laptop  
 PC equipments  
 Tablet (PC)  
 Television

12

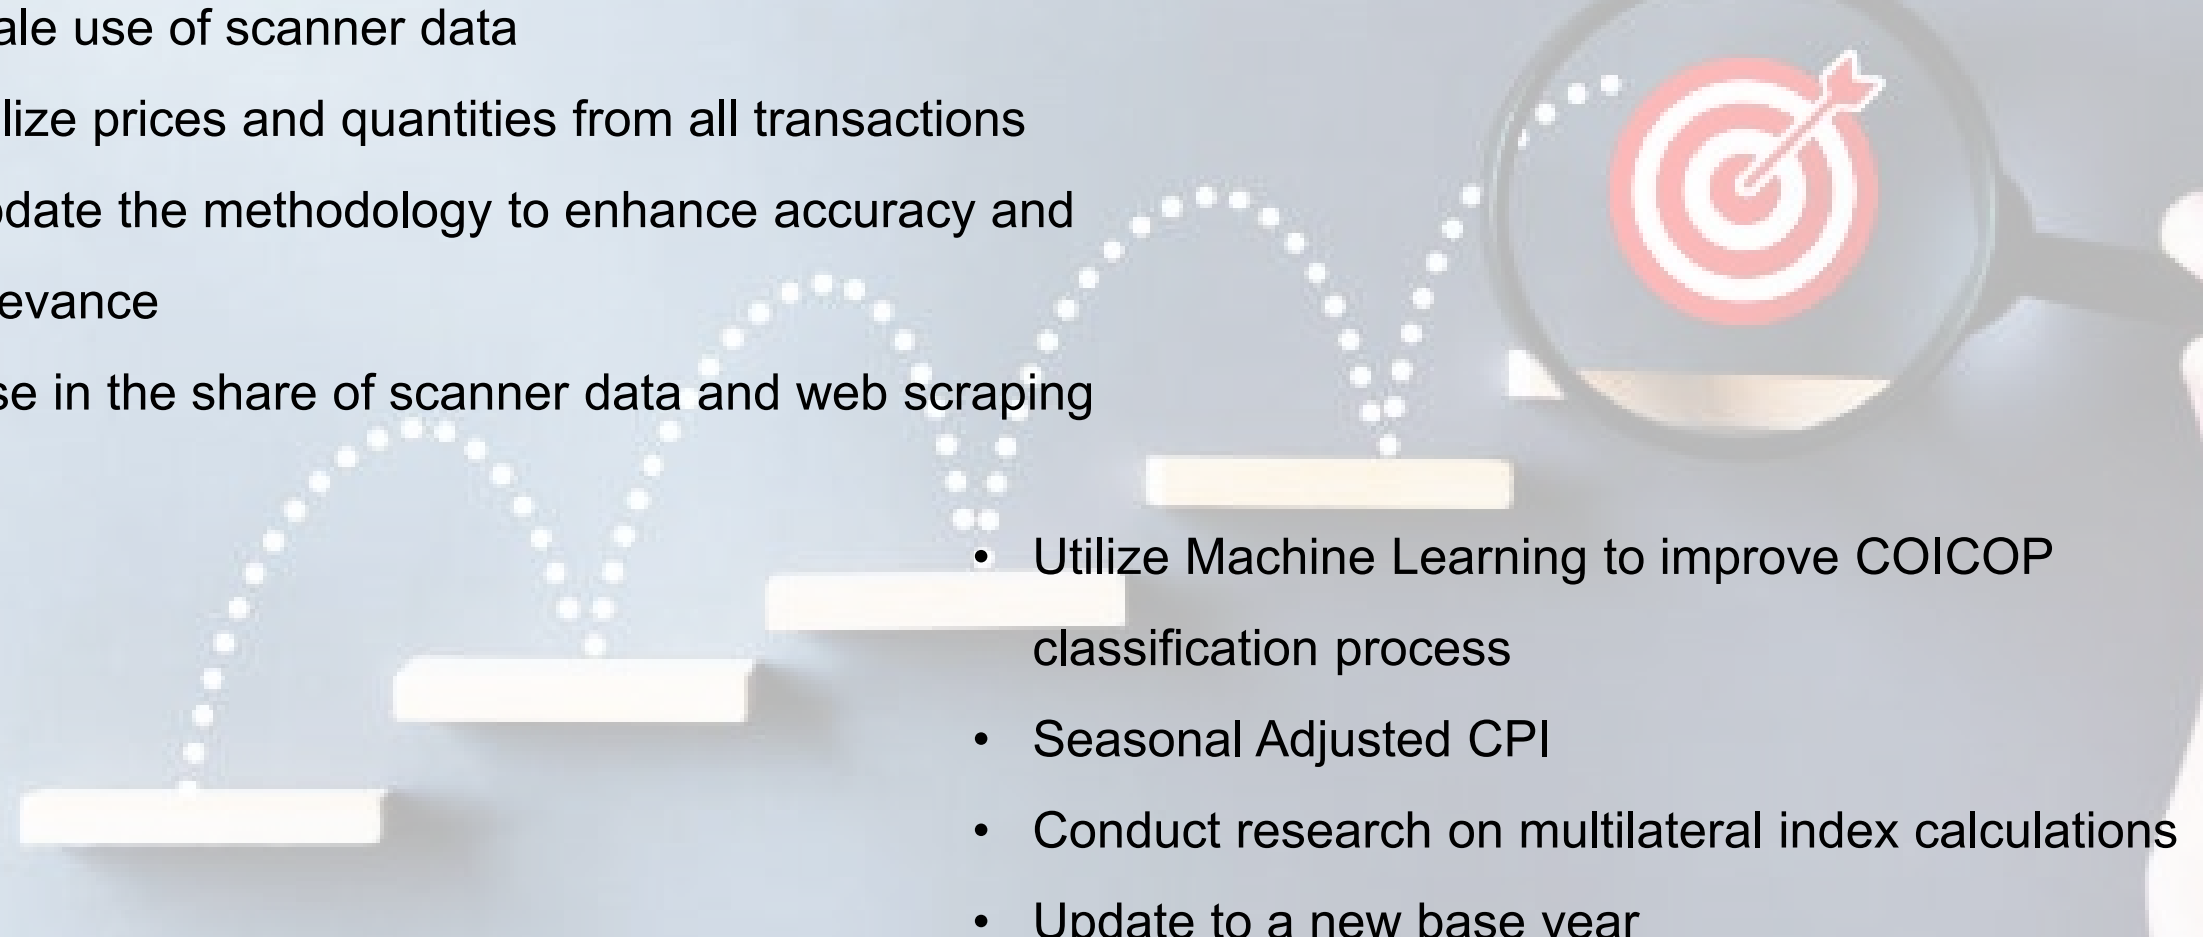

## Miscellaneous Goods And Services

Bag for women  
 Hair care appliances  
 School bag  
 Travel goods  
 Umbrella  
 Watch  
 Smart watch

# Web Scraping Advantages and Disadvantages

# Future Plans

- Full scale use of scanner data
    - Utilize prices and quantities from all transactions
    - Update the methodology to enhance accuracy and relevance
  - Increase in the share of scanner data and web scraping data
    - Utilize Machine Learning to improve COICOP classification process
    - Seasonal Adjusted CPI
    - Conduct research on multilateral index calculations
    - Update to a new base year
- 
- The background of the slide features a hand holding a magnifying glass over a target icon. A dotted line path leads from the bottom left towards the target. There are also several yellow rectangular bars of varying lengths scattered across the lower half of the slide.
